HELMHOLTZ RESEARCH FOR
GRAND CHALLENGES

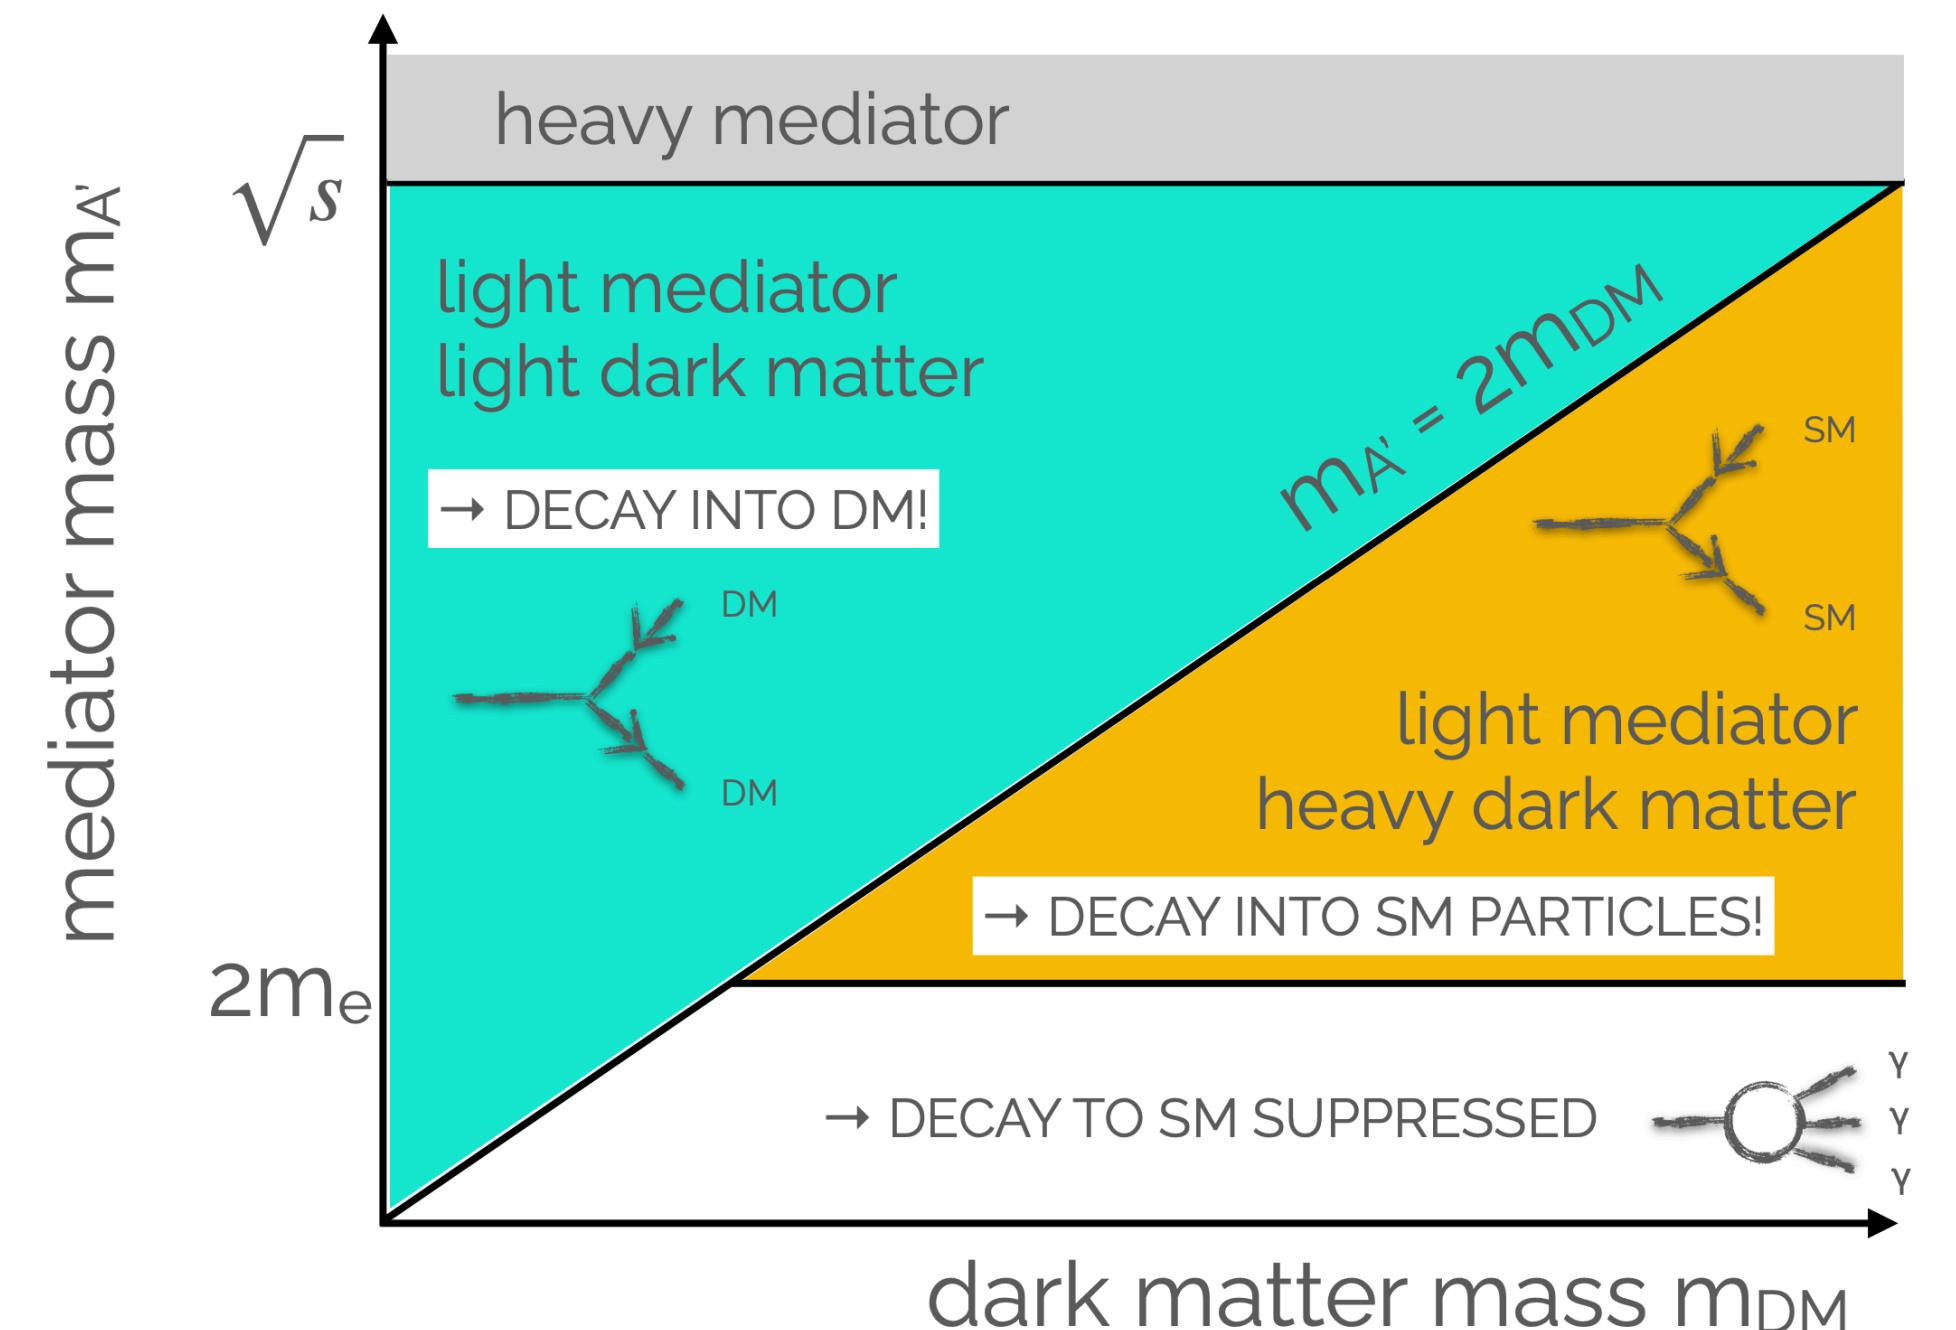

Light dark sectors and precision measurements.

1. Direct searches for BSM physics:

- ▶ No signs in searches for SUSY and extra dimensions
- ▶ Light dark sectors not yet well tested
- ▶ Target **mediators** that couple dark sectors to **SM**
- ▶ Theoretical description via portal interactions

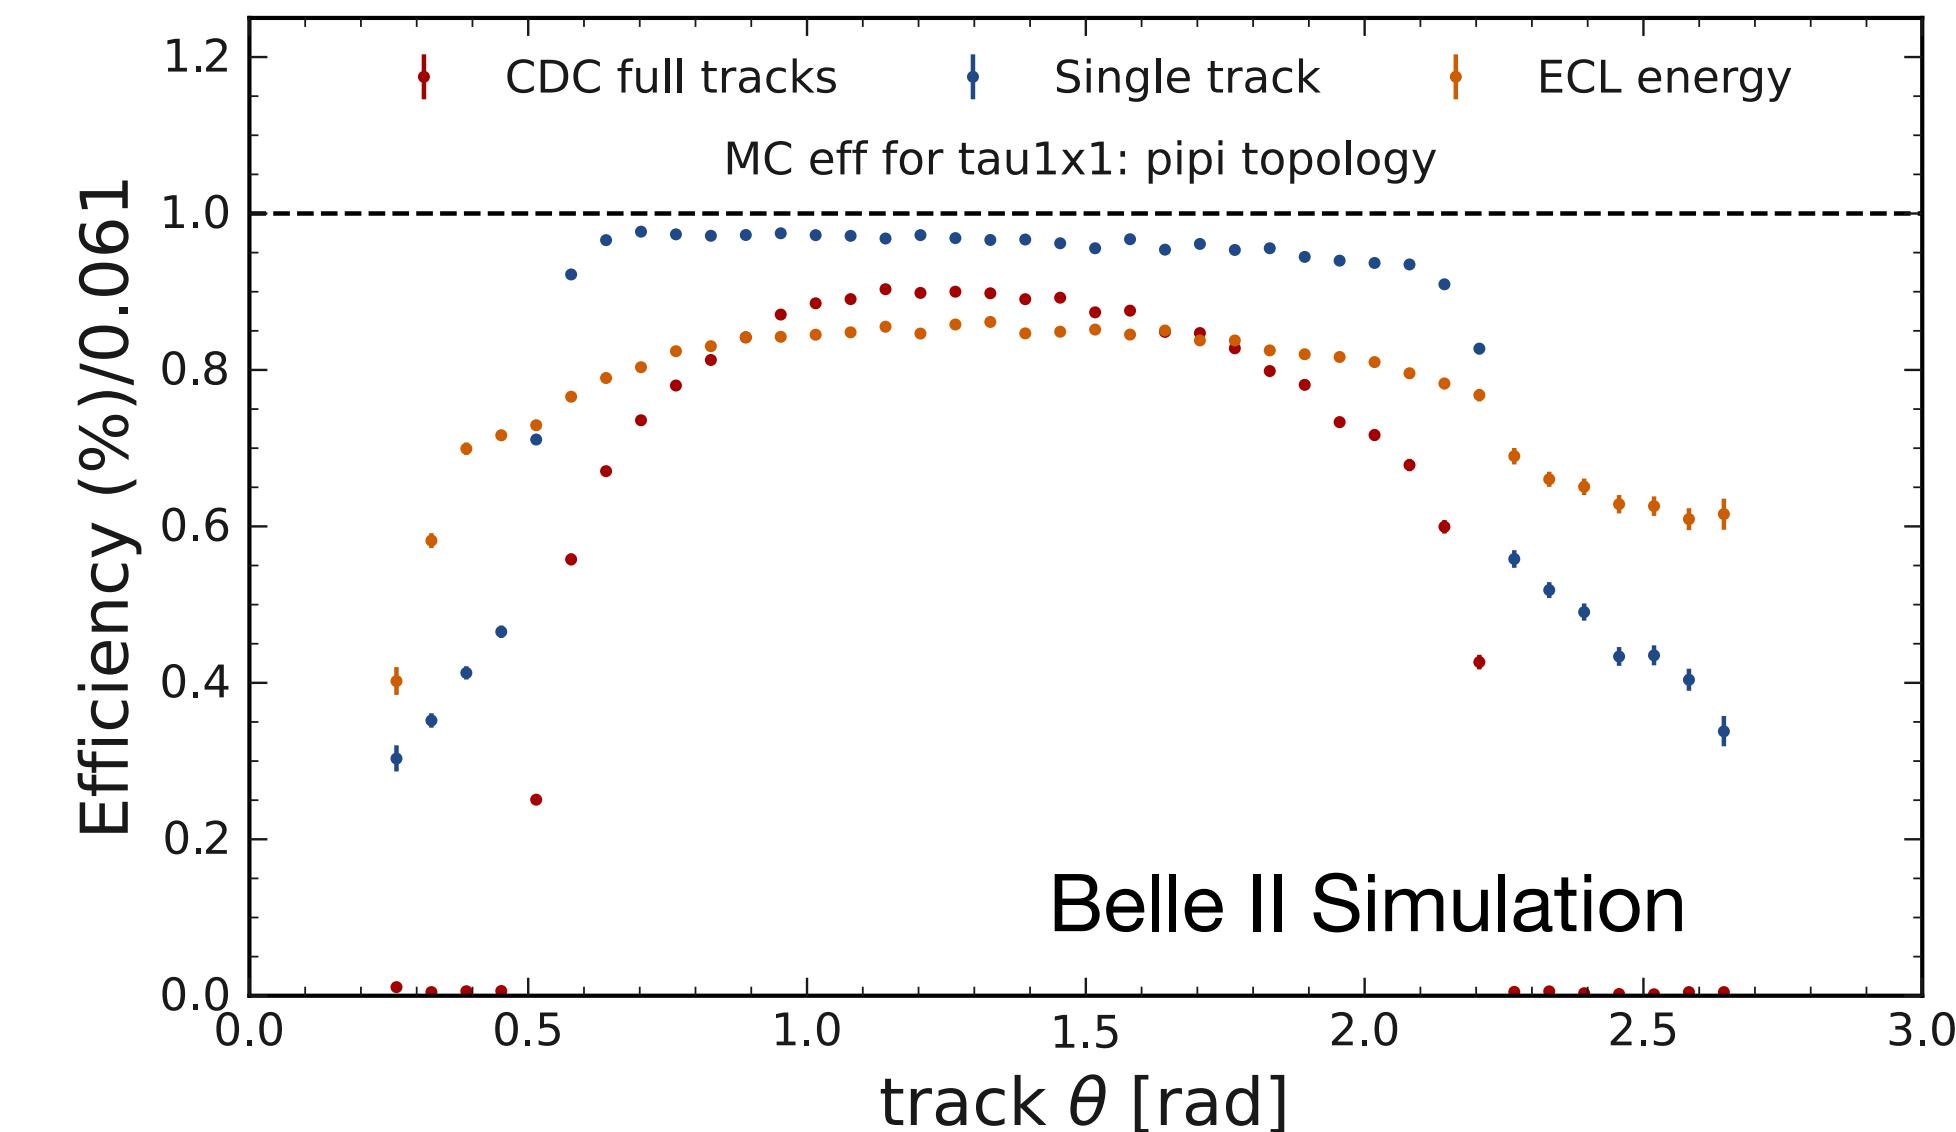

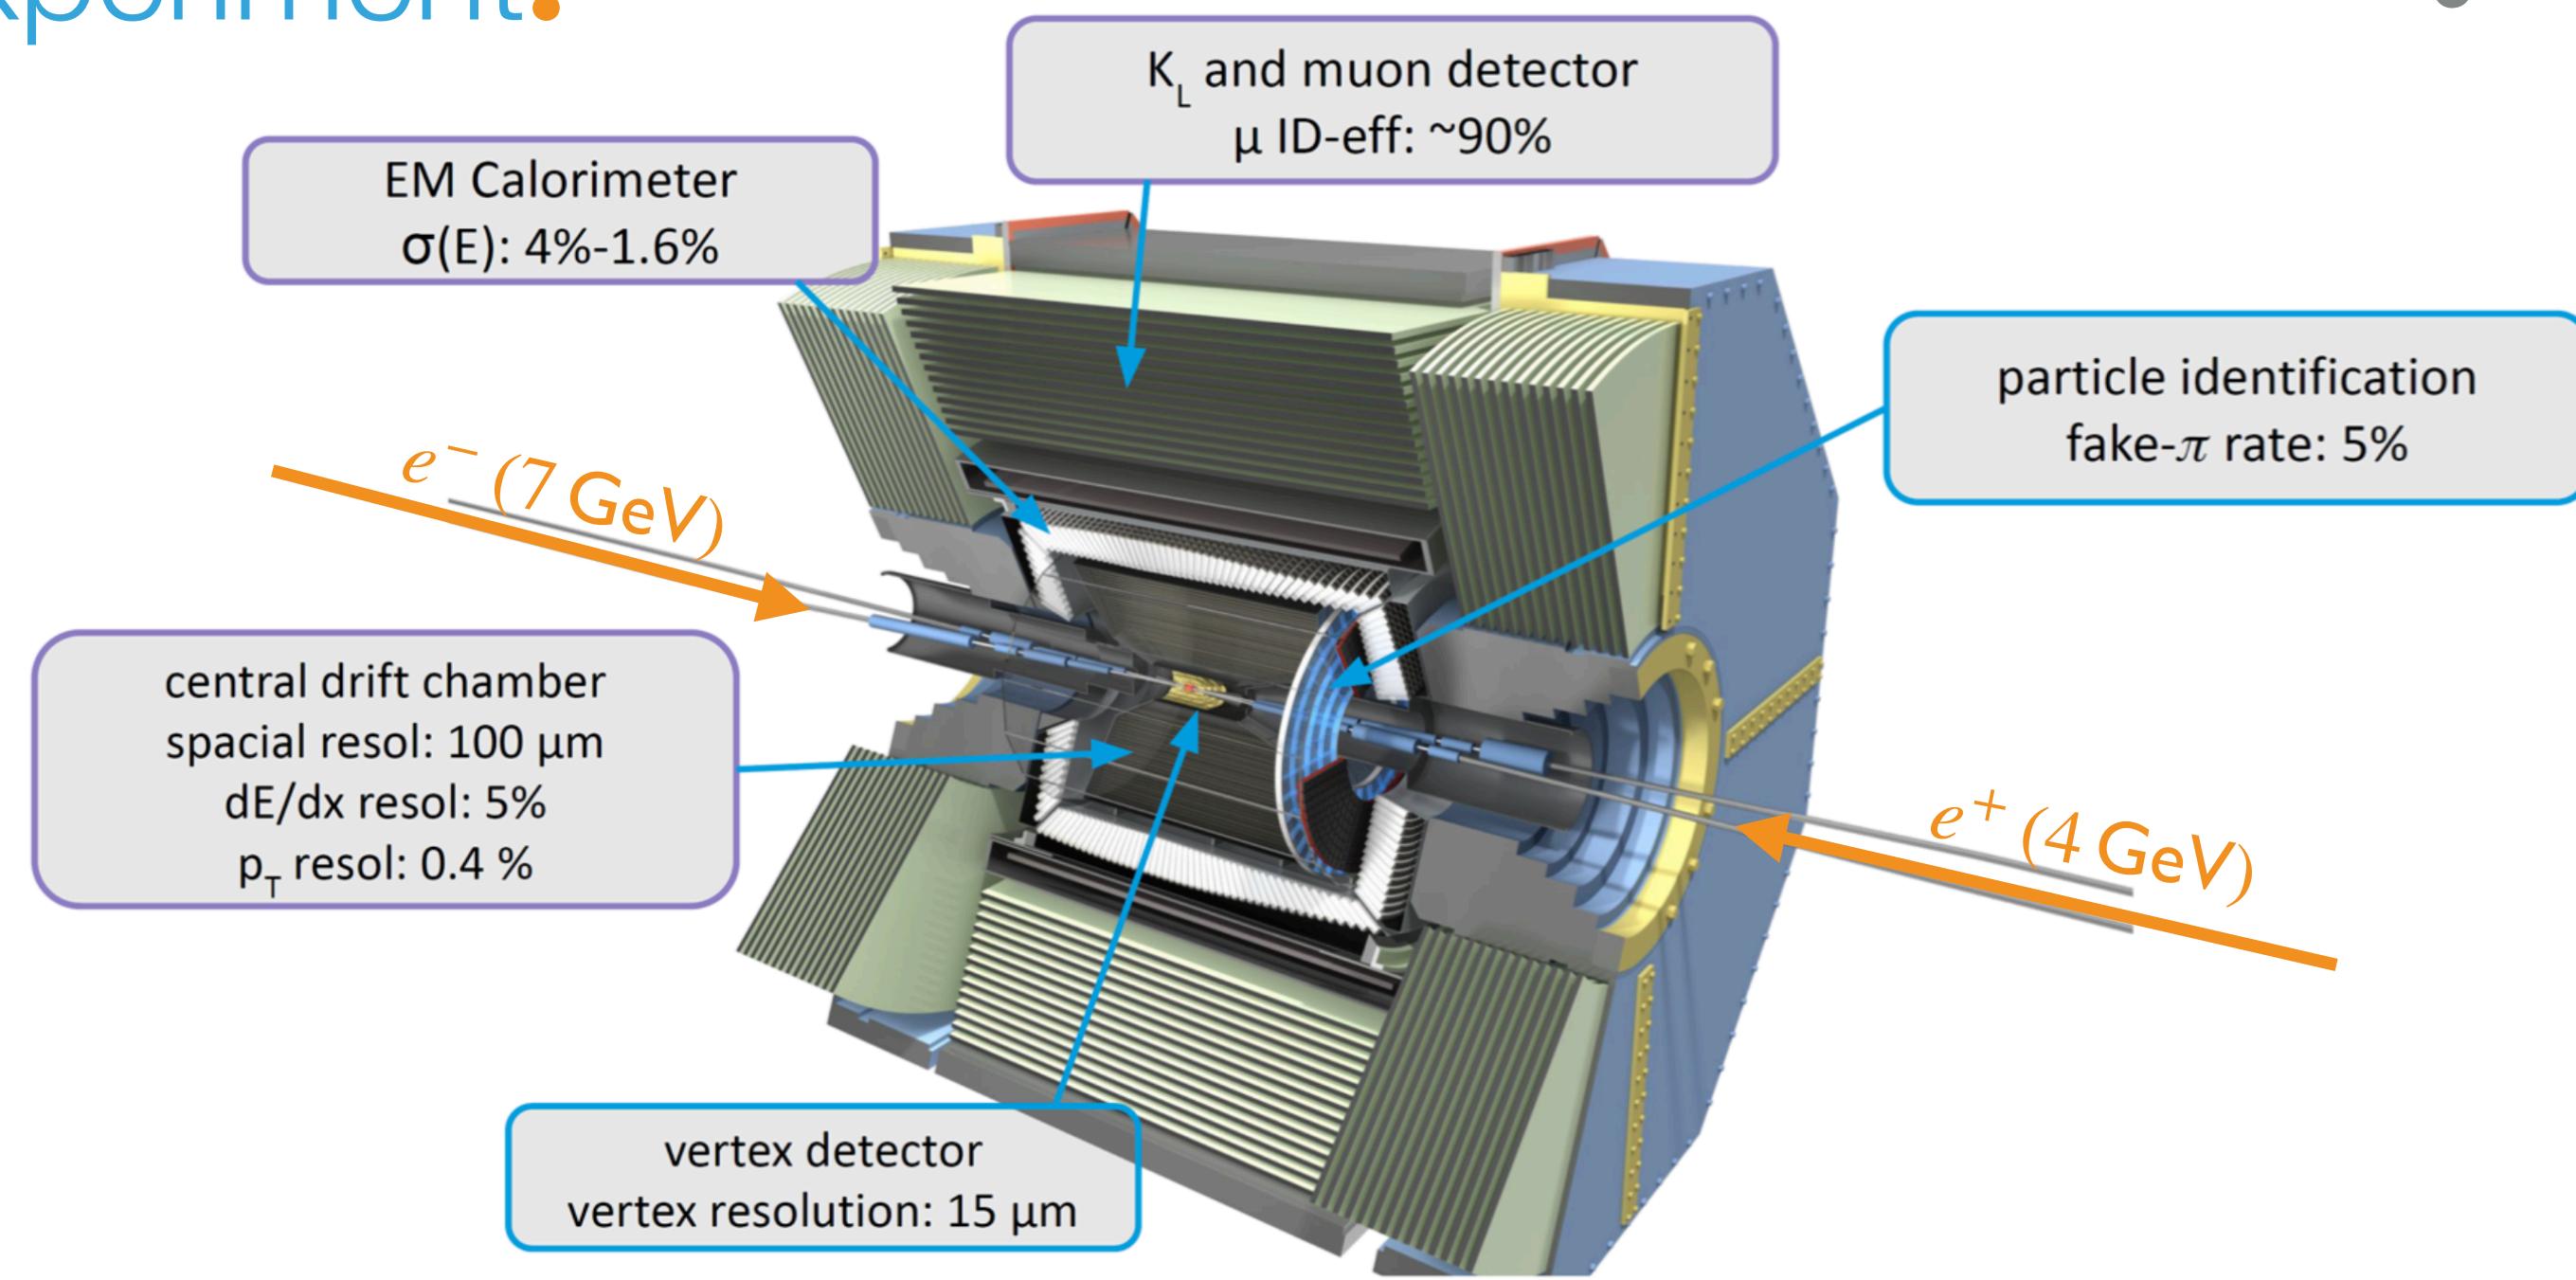

2. Precision measurements of **SM** parameters

- ▶ Direct test of **SM** and indirectly constrain physics beyond **SM**
- ▶ τ -lepton mass: related to LUV tests, BF predictions and α_s

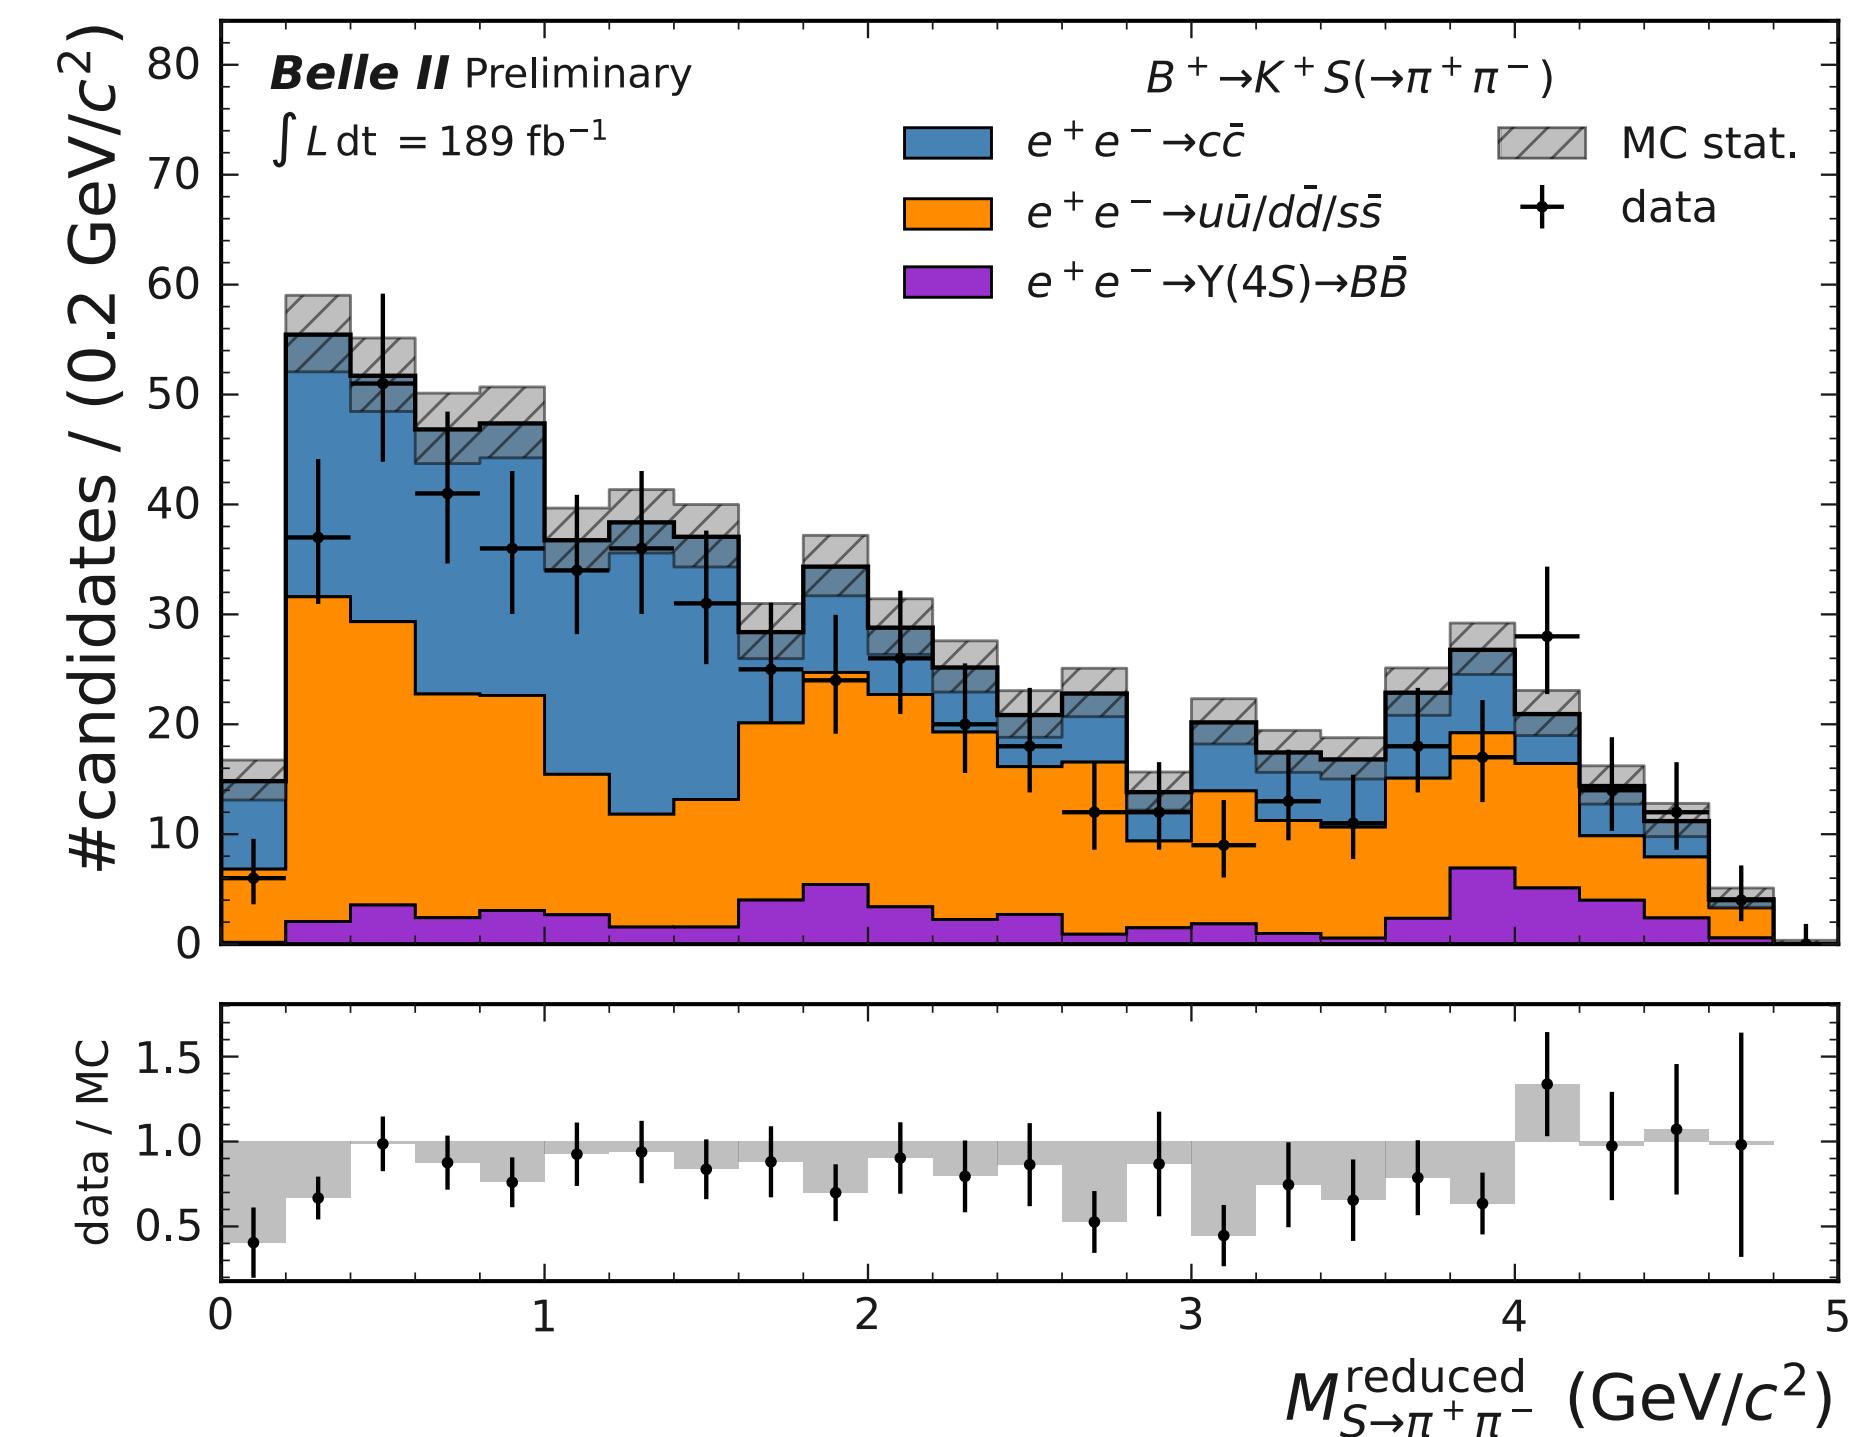

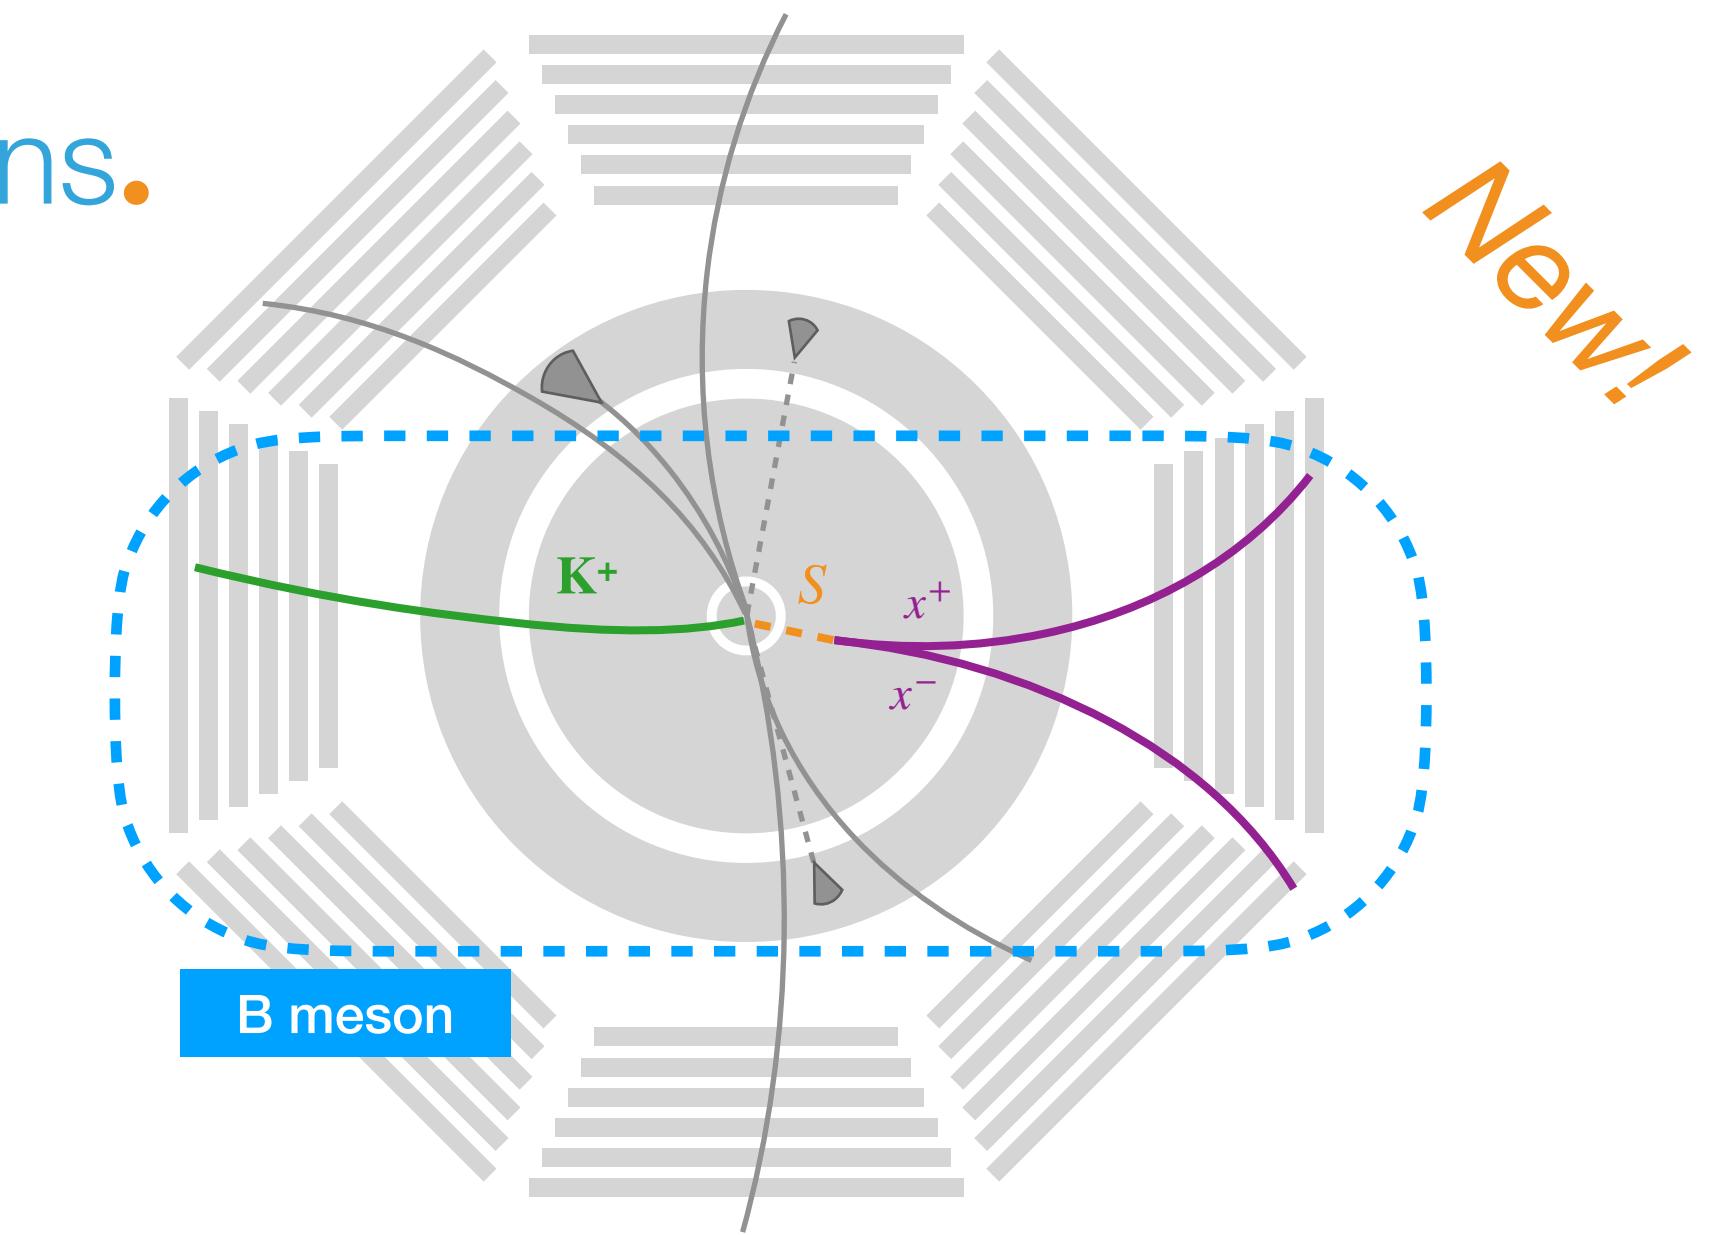

SuperKEKB accelerator & Belle II experiment.

- ▶ SuperKEKB accelerator
- ▶ Upgraded Belle II detector
- ▶ Running at the $\Upsilon(4S)$
- ▶ Collected 428 fb^{-1} , currently in LS1
- ▶ Well known initial conditions
- ▶ Little/no pile-up – clean environment
- ▶ Special triggers for low multiplicity
 - ▶ Single photon trigger (not available at Belle)
 - ▶ Single muon trigger
 - ▶ Single track trigger using NN

Search for a long-lived (pseudo-)scalar in $b \rightarrow s$ transitions.

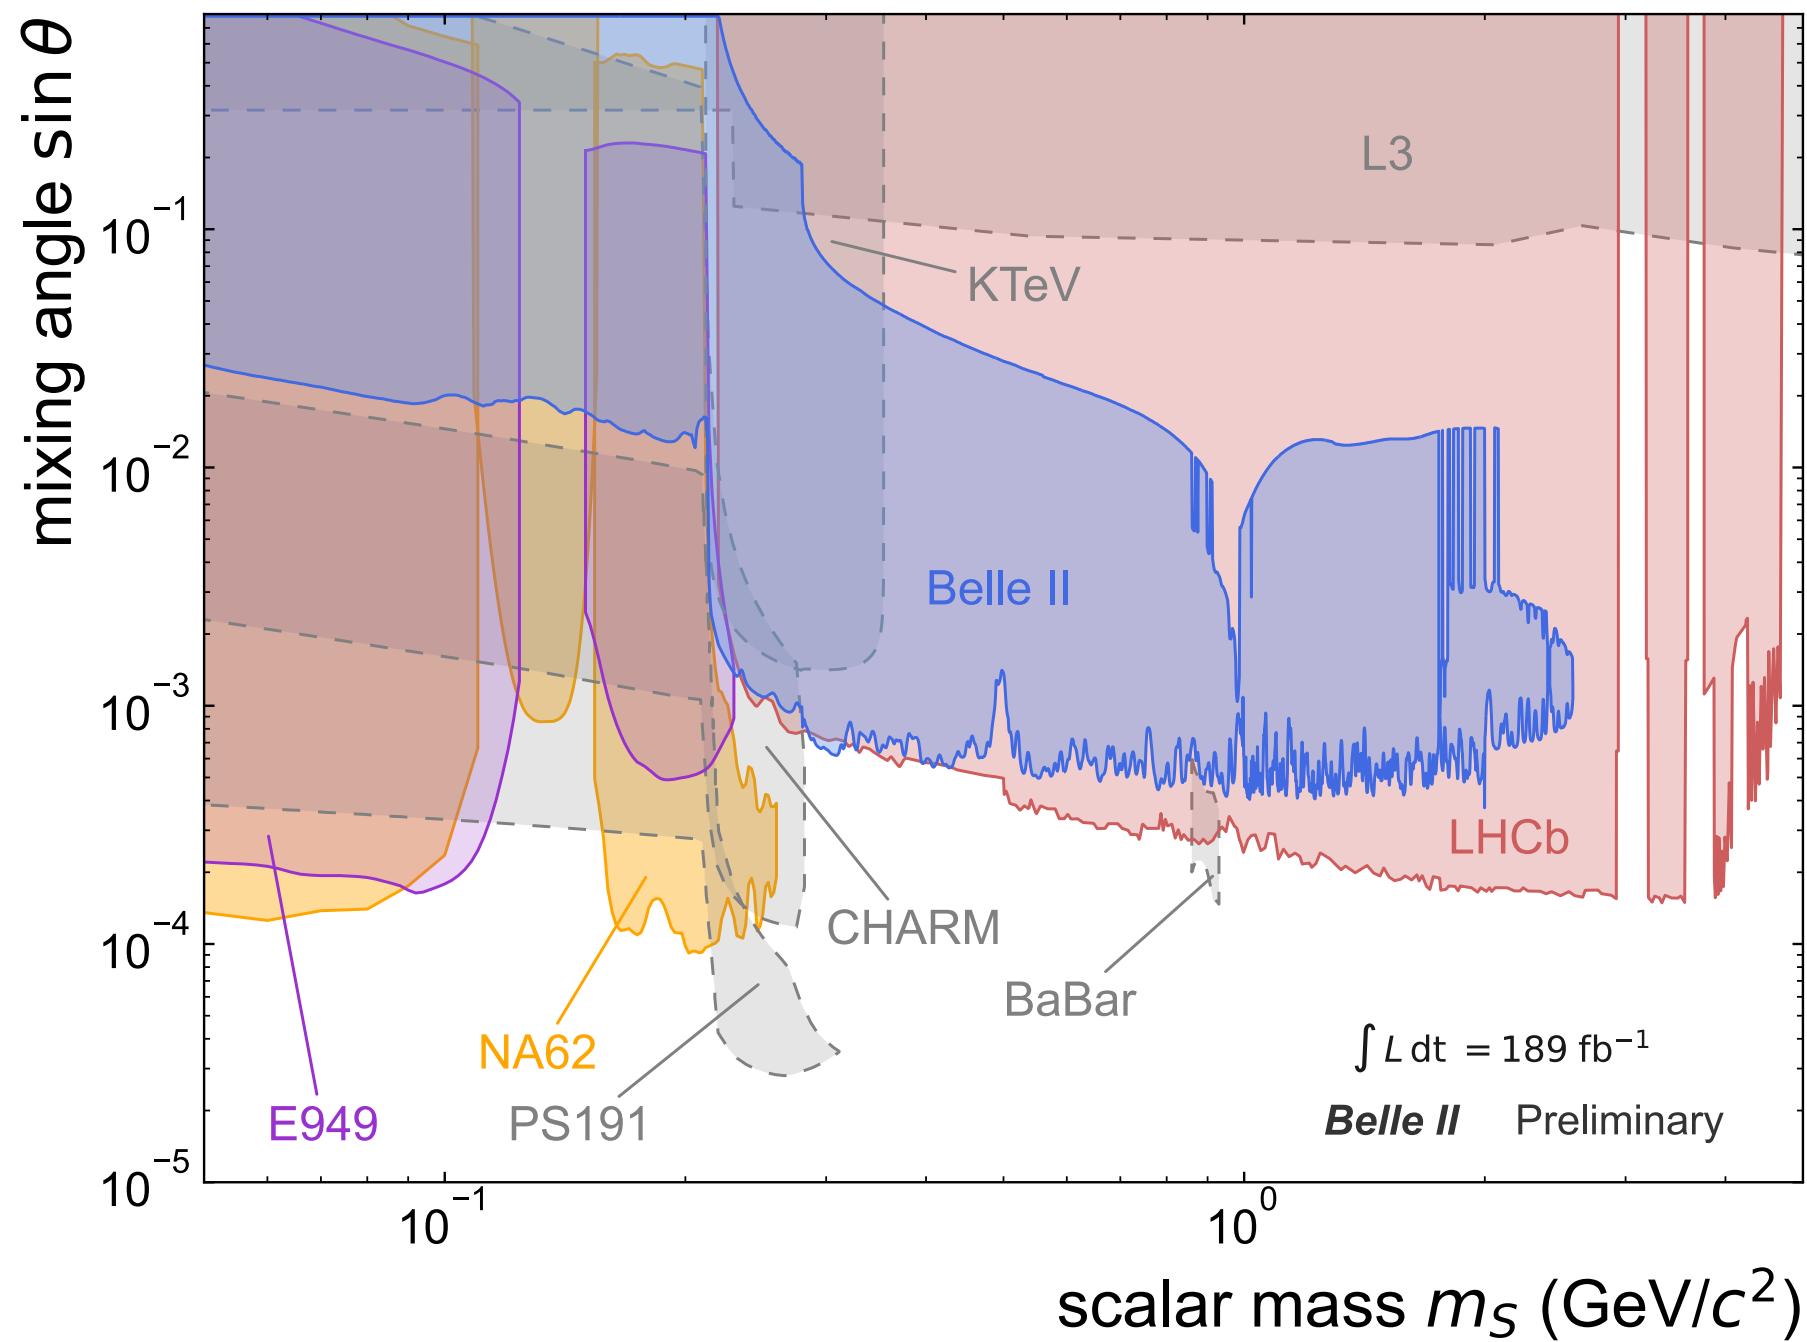

- ▶ First Belle II long-lived particle (LLP) search!
- ▶ Search in eight exclusive fully visible channels:
 - ▶ $B^+ \rightarrow K^+ S$ and $B^0 \rightarrow [K^{*0} \rightarrow K^+ \pi^-]S$
 - ▶ $S \rightarrow ee/\mu\mu/\pi\pi/KK$
- ▶ Challenge: LLP performance
 - ▶ Corrections using K_S^0 control sample
 - ▶ Reconstruction efficiency
 - ▶ M_S shape
 - ▶ Particle identification
 - ▶ Bump hunt in LLP mass distribution M_S

Search for a long-lived (pseudo-)scalar in $b \rightarrow s$ transitions.

New!

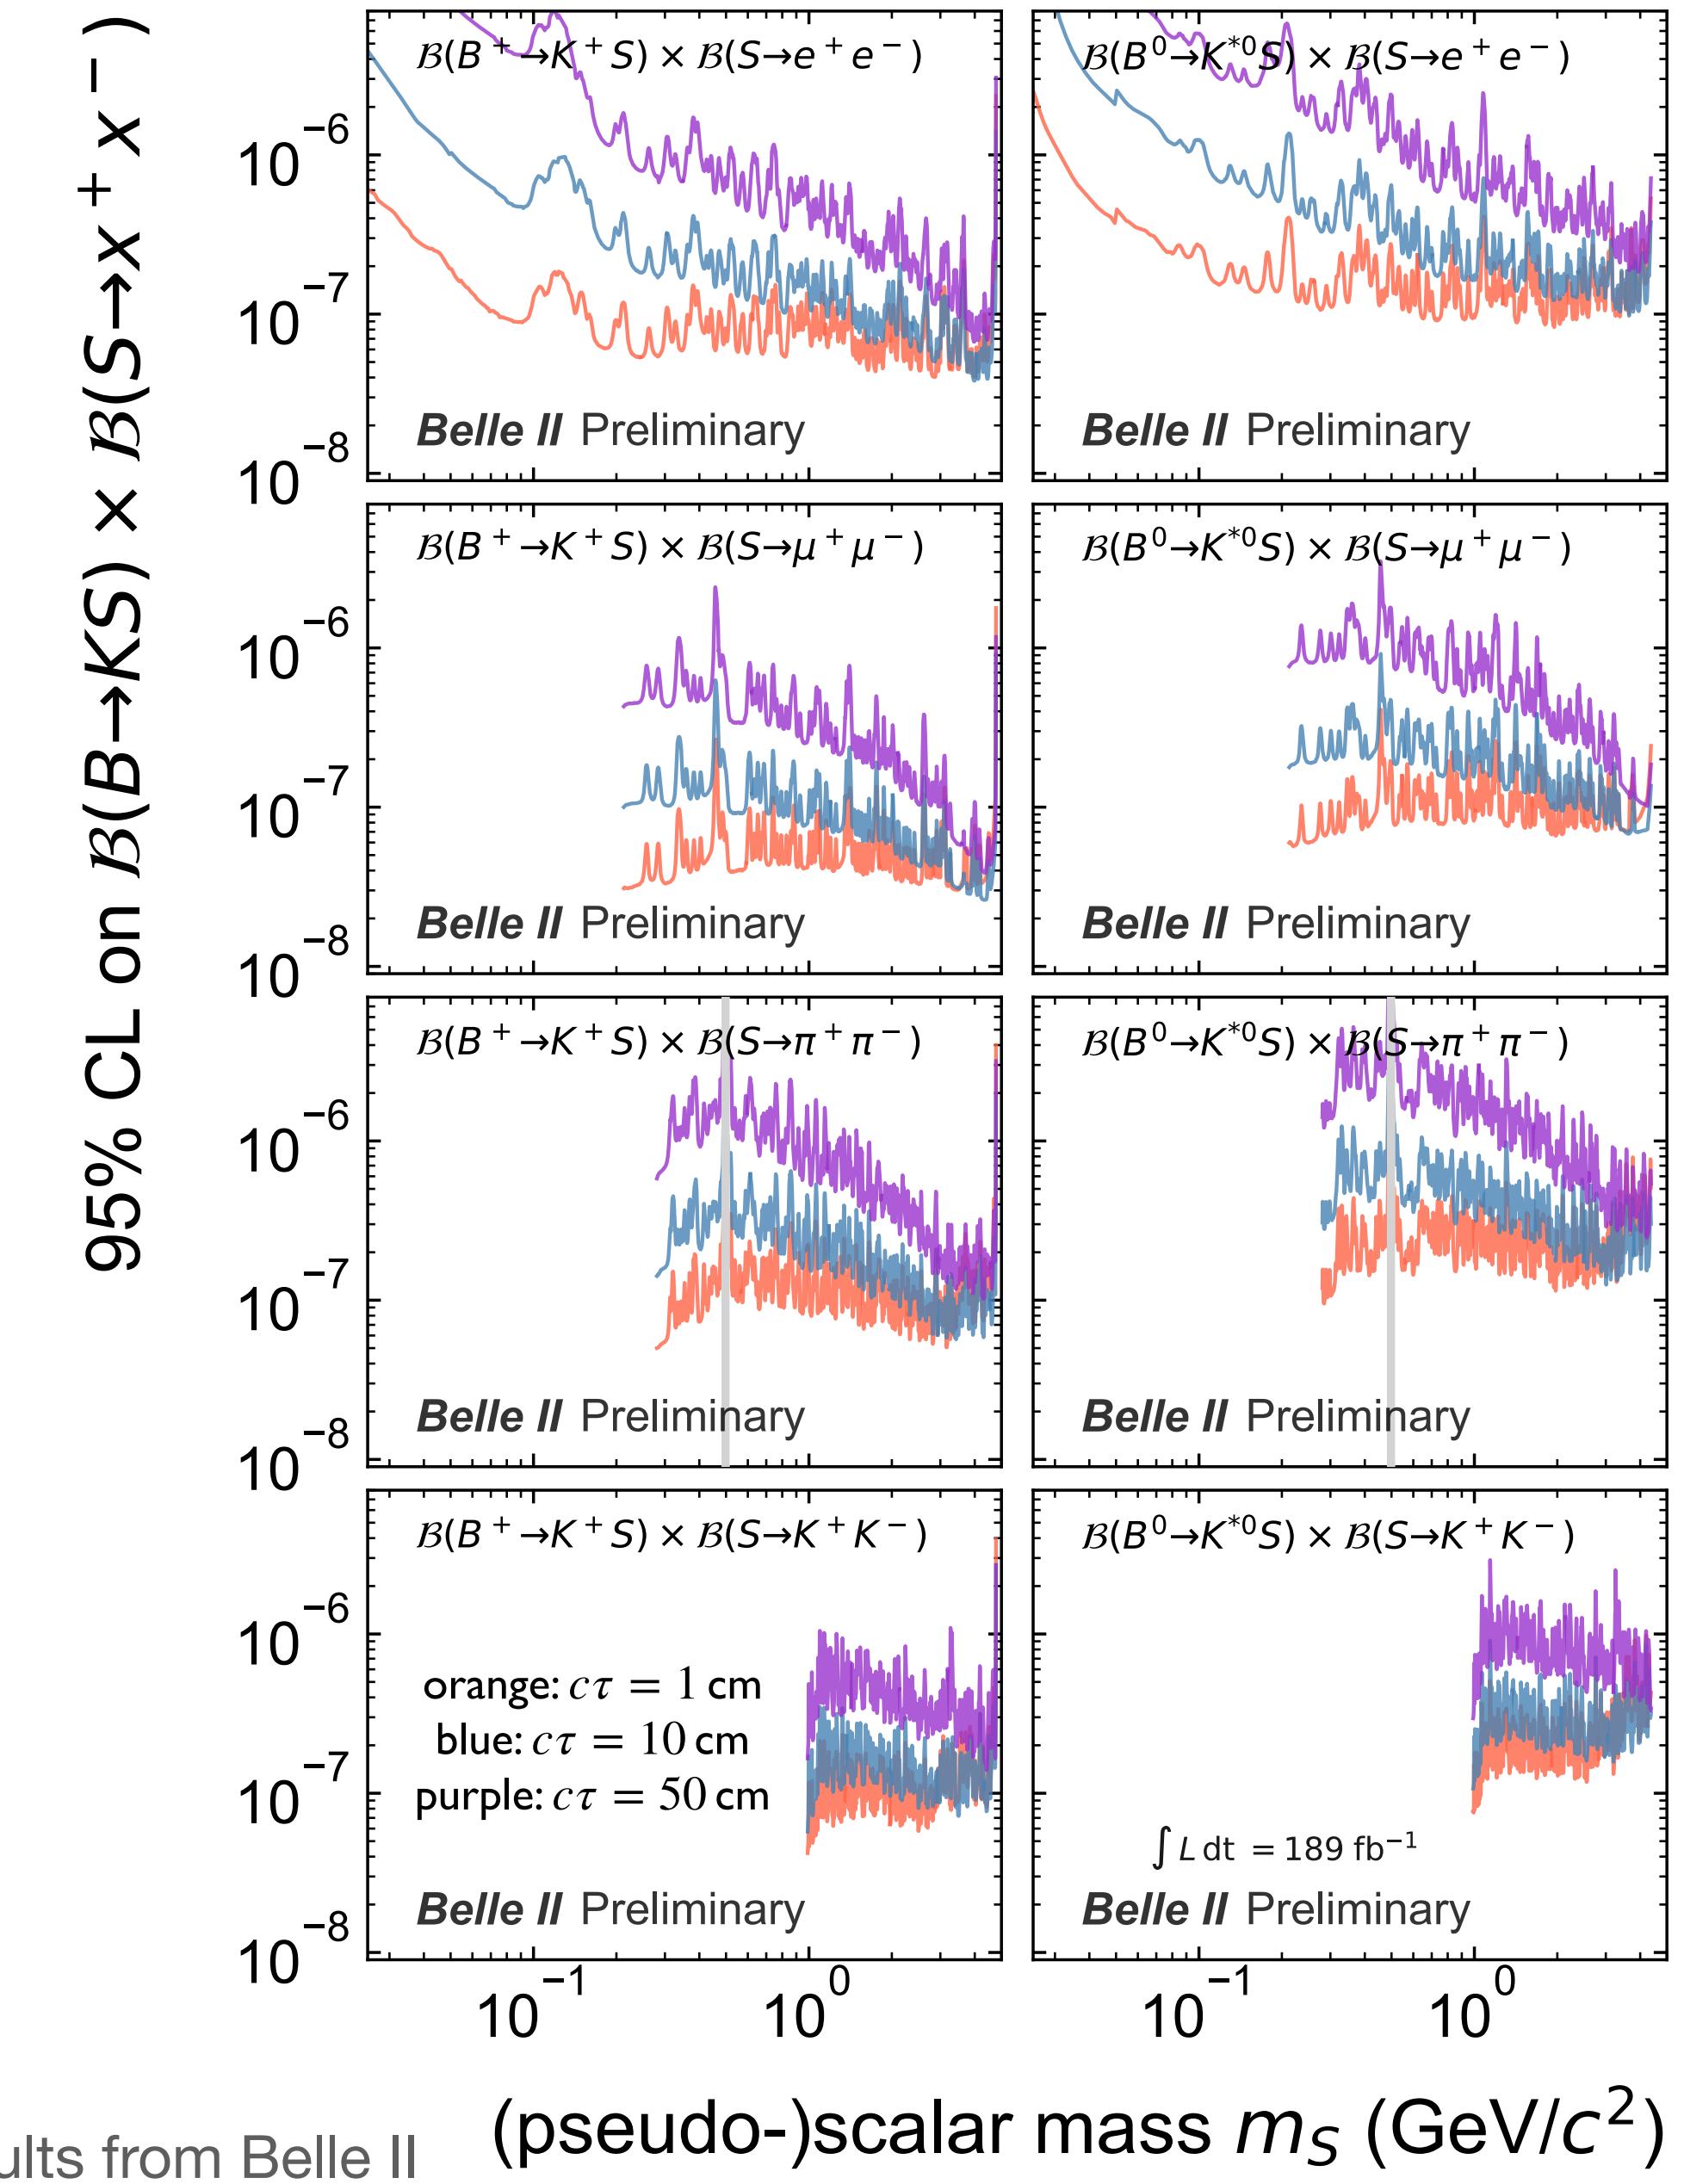

- Model independent limits on (pseudo-)scalar LLP branching fraction
- First limits for LLP decays into hadrons
- Interpretation as dark scalar S [1] (PBC BC4 [2])

[1]: Phys. Rev. D 101, 095006 (2020)

(pseudo-)scalar mass m_S (GeV/c²)

DESY

Search for an invisibly decaying Z' boson.

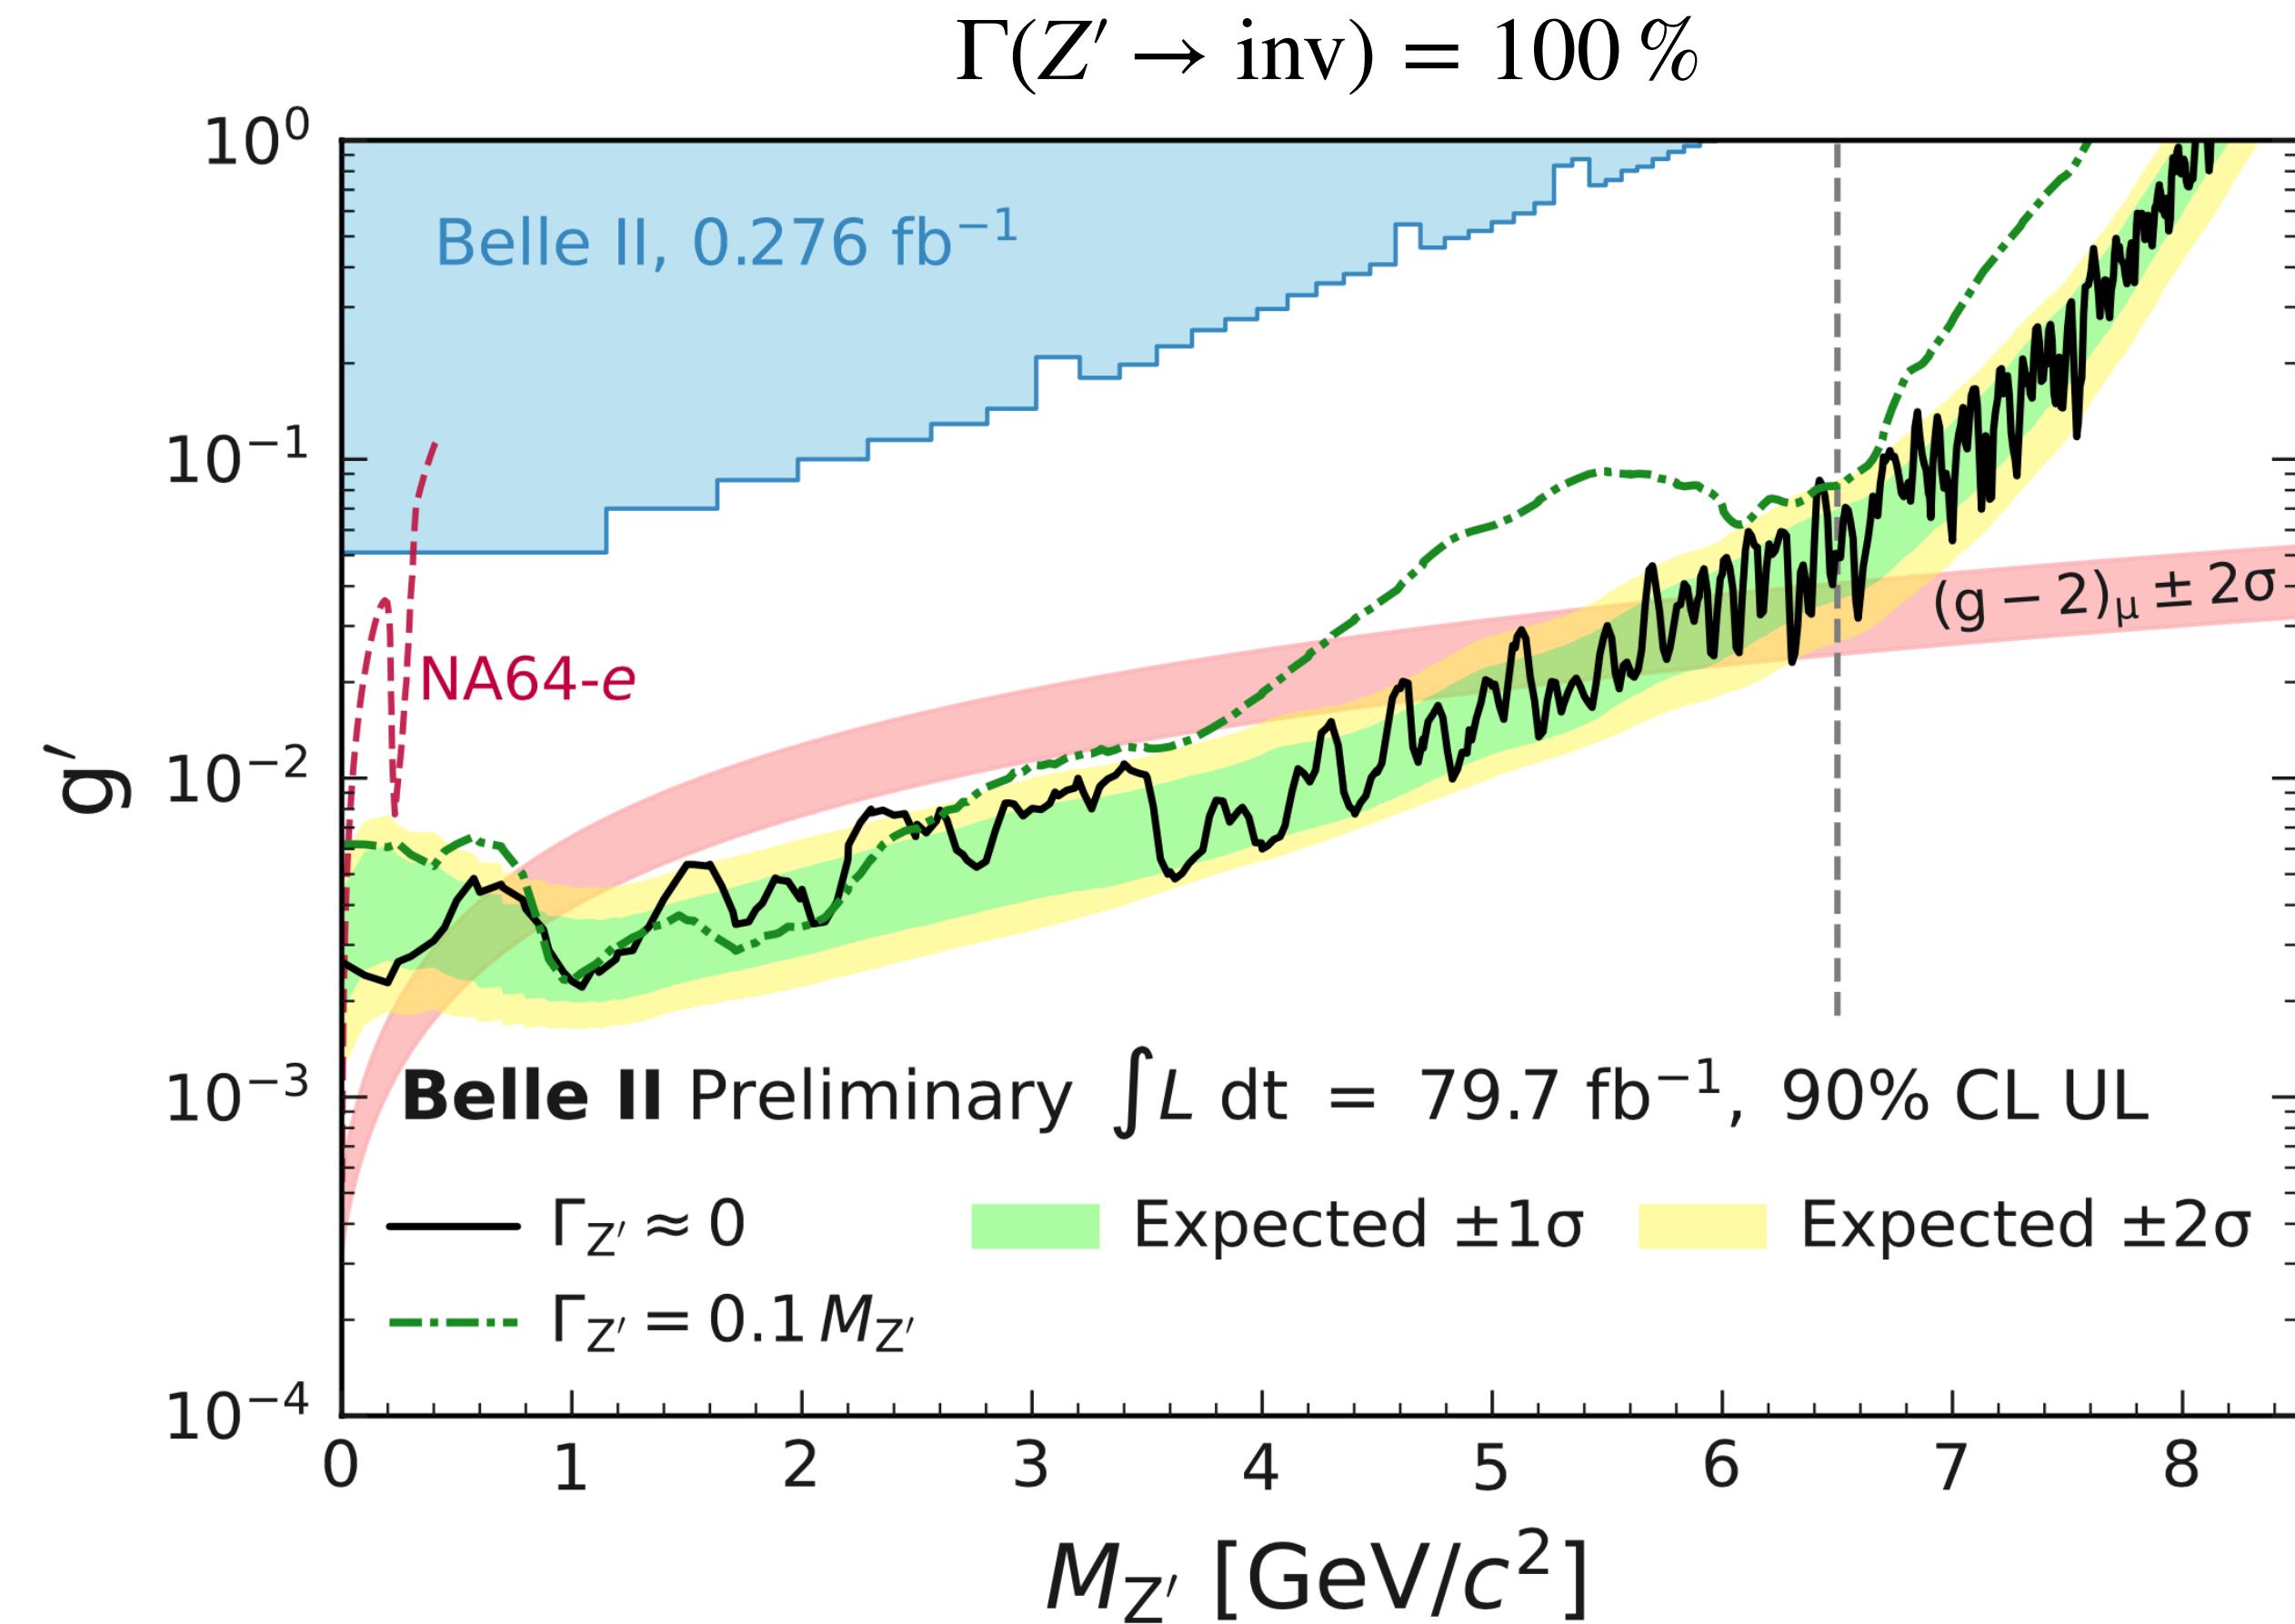

- ▶ Additional massive gauge boson Z' with $L_\mu - L_\tau$ model
- ▶ Coupling only to second and third generation leptons
- ▶ Could explain discrepancies in $(g - 2)_\mu$ [1]
- ▶ Study system recoiling against $\mu\mu$
- ▶ 2d fit in M_{recoil}^2 and $\theta_{\text{recoil}}^{\text{CMS}}$
- ▶ Challenging $\tau\tau$ background tackled with neural network simultaneously trained for all Z' masses [2]
- ▶ Systematics and corrections from ee , $e\mu$ and $\mu\mu\gamma$ control samples
- ▶ Using 79.7 fb^{-1} , update of [3] with 300x dataset

- [1] B. Shuve et al., [Phys. Rev. D 89, 113004](#)
- [2] F. Abudinén et al., [Eur.Phys.J.C 82 \(2022\) 2, 121](#)
- [3] Belle II Collaboration, [Phys. Rev. Lett. 124, 141801 \(2020\)](#)

Search for an invisibly decaying Z' boson.

7

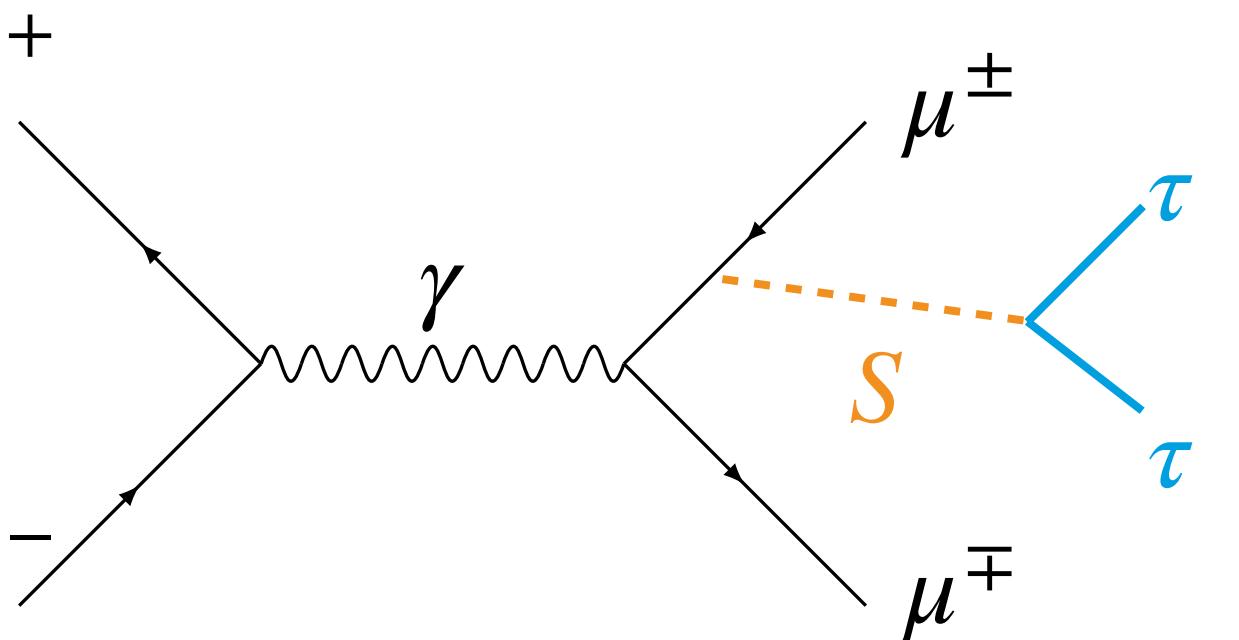

$(g - 2)_\mu$ preferred region excluded between $0.8 < m_{Z'} < 4 \text{ GeV}/c^2$

[arXiv:2212.03066](https://arxiv.org/abs/2212.03066) submitted to PRL

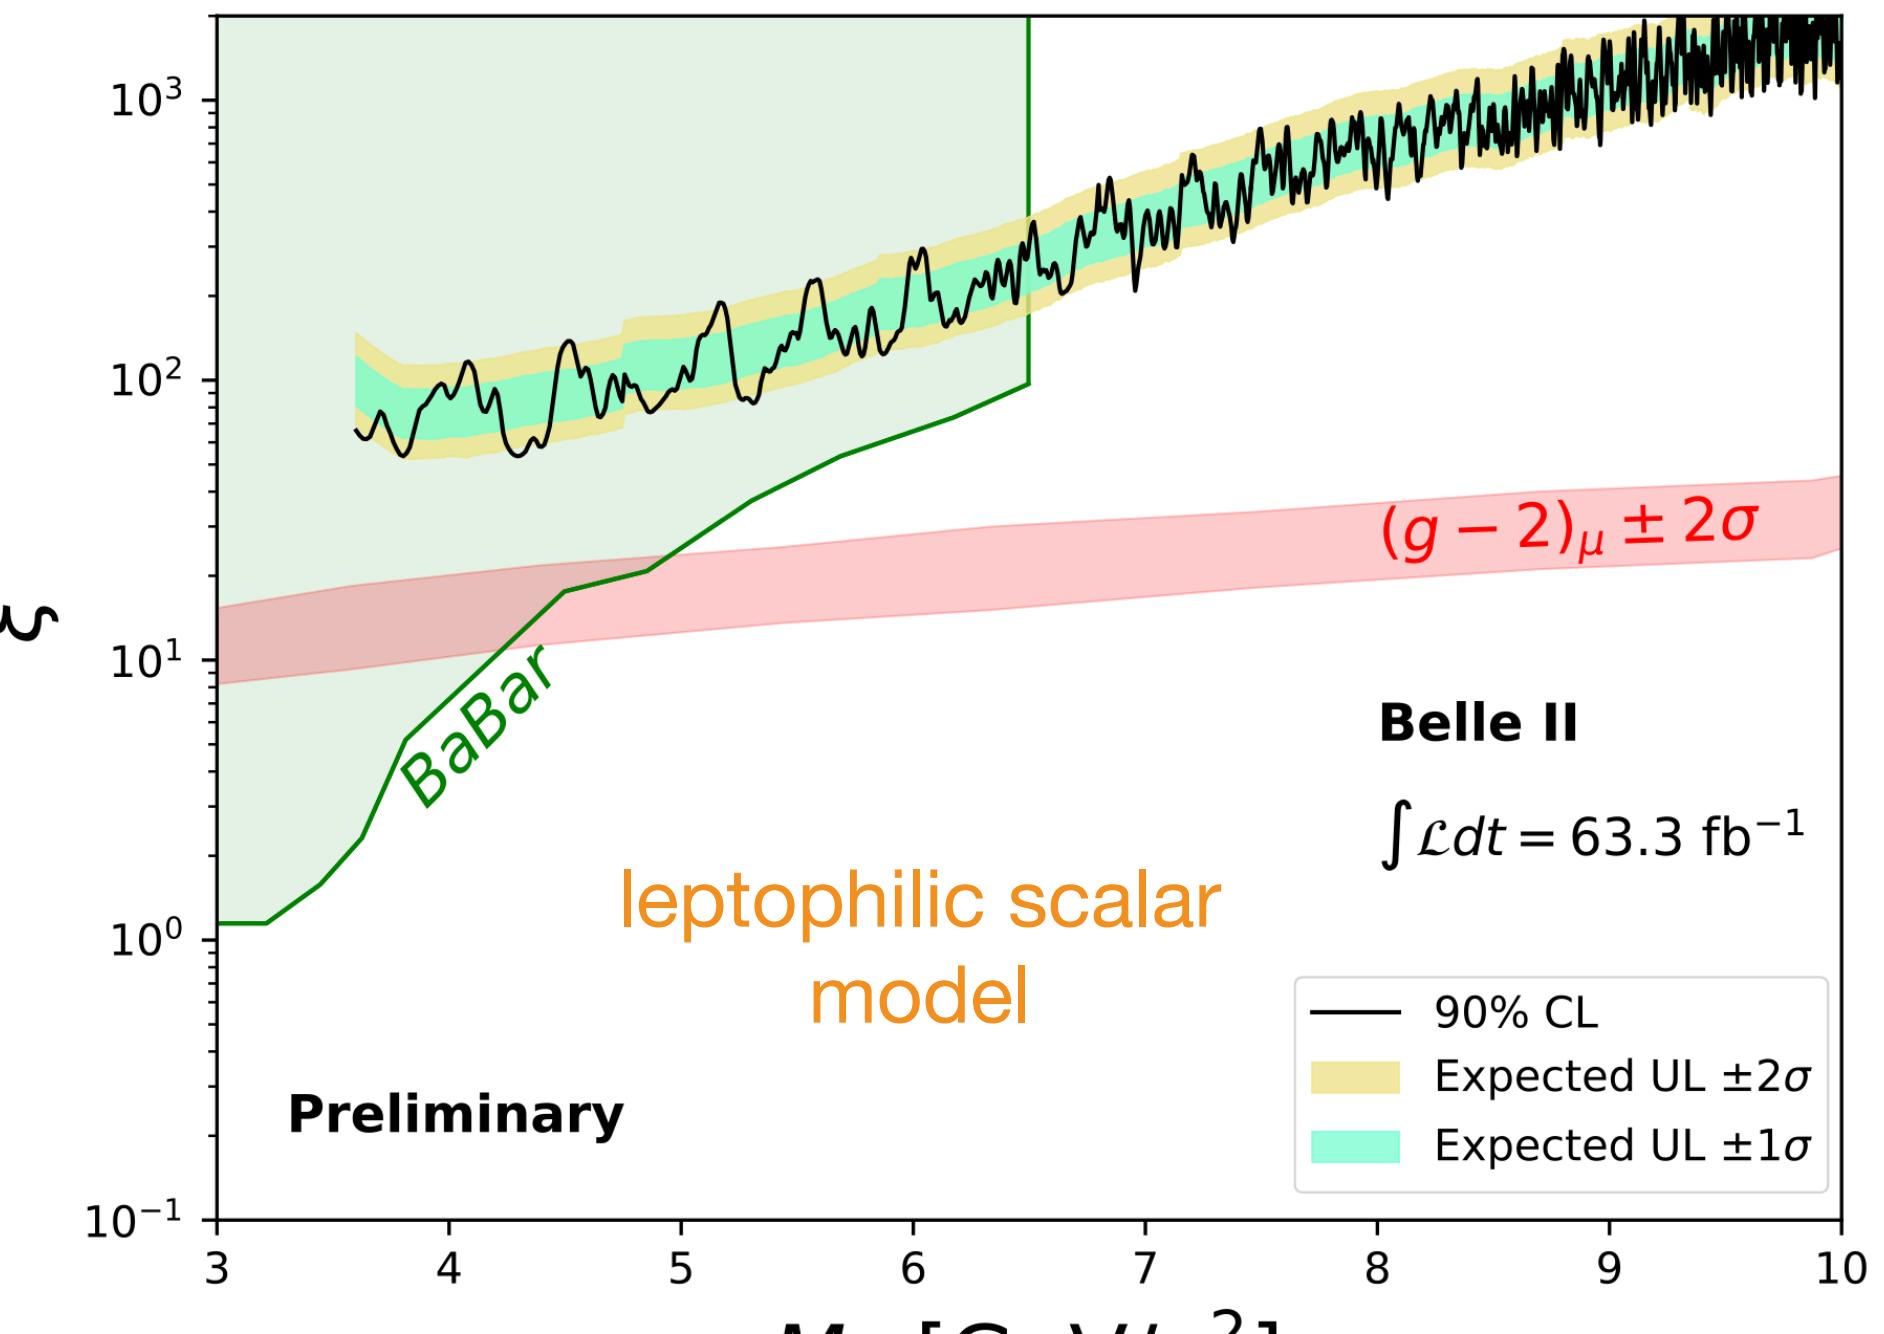

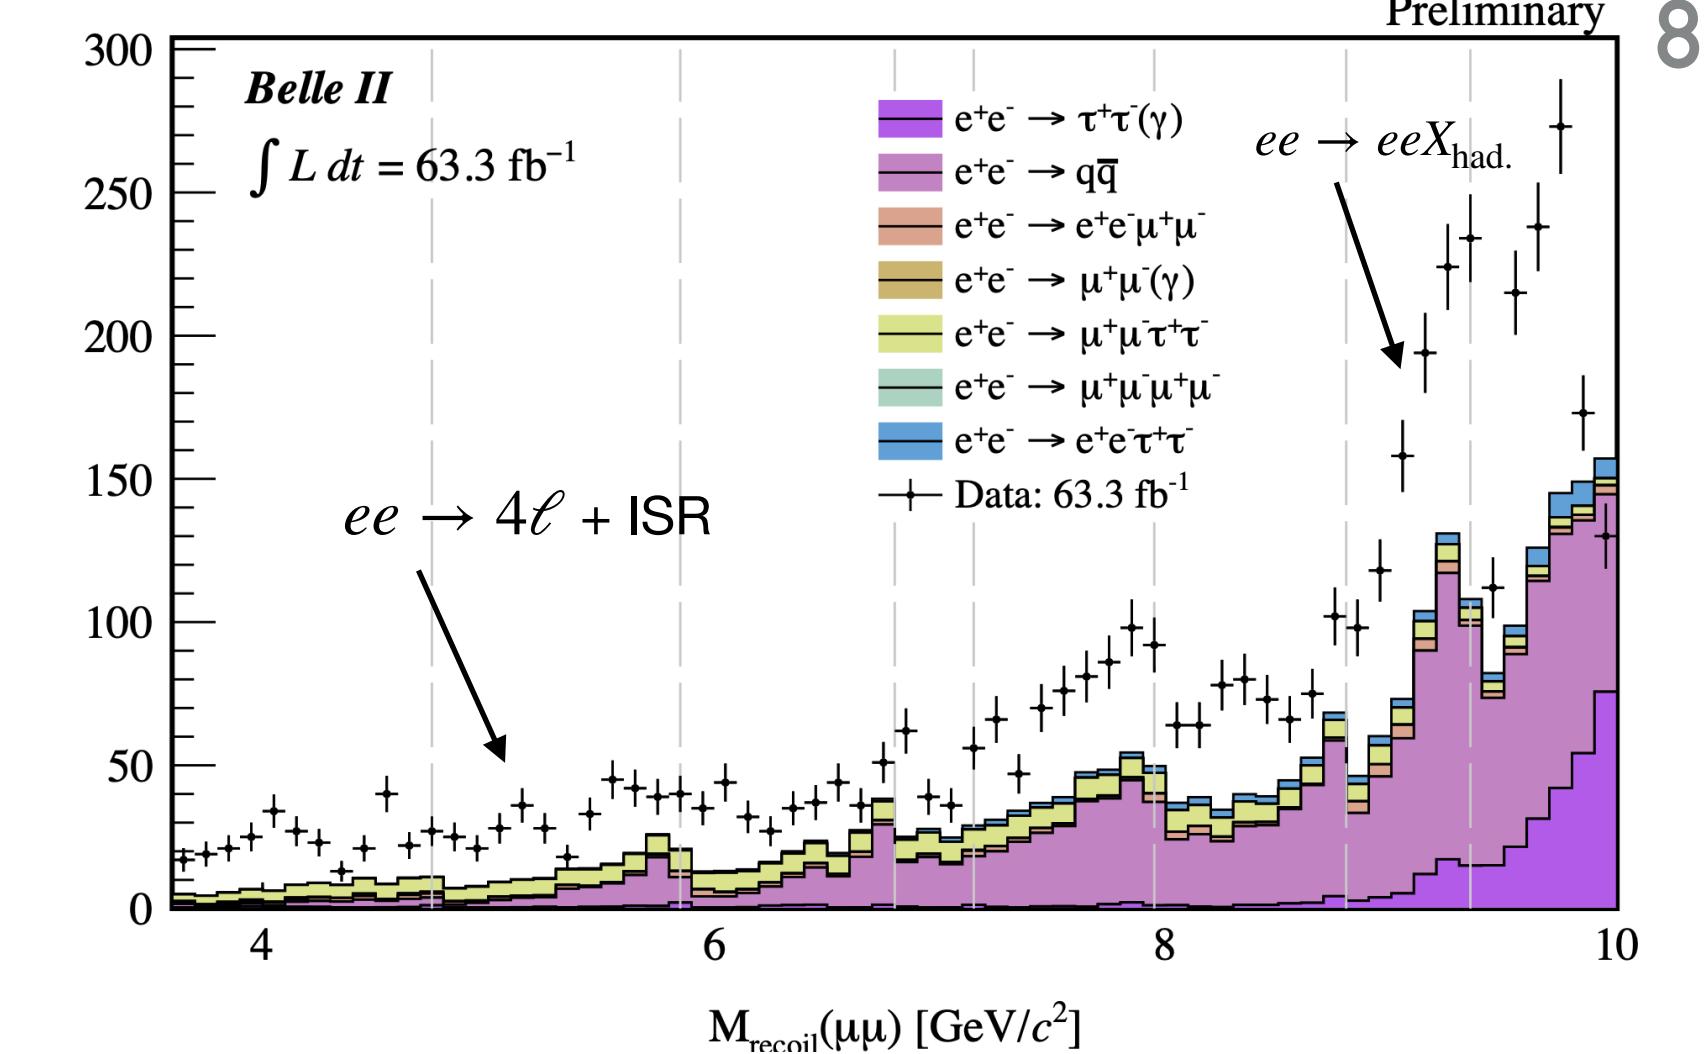

Search for a $\tau\tau$ resonance in $ee \rightarrow \mu\mu\tau\tau$.

- ▶ Four track final-state: $\tau^\pm \rightarrow \pi^\pm(\pi^0)$
- ▶ Challenging backgrounds in final-state with neutrinos
 - ▶ Require missing energy by $M_{4\text{ tracks}} < 9.5 \text{ GeV}/c^2$
 - ▶ Eight classifiers in different mass regions
- ▶ Signal extracted in fits to $M_{\text{recoil}}(\mu\mu)$
- ▶ Background determined directly in data \rightarrow un-modelled non-peaking background are not problematic
- ▶ Strongest constraints for $M_S > 6.5 \text{ GeV}/c^2$ in leptophilic S model [1]

Dark sector and τ results from Belle II

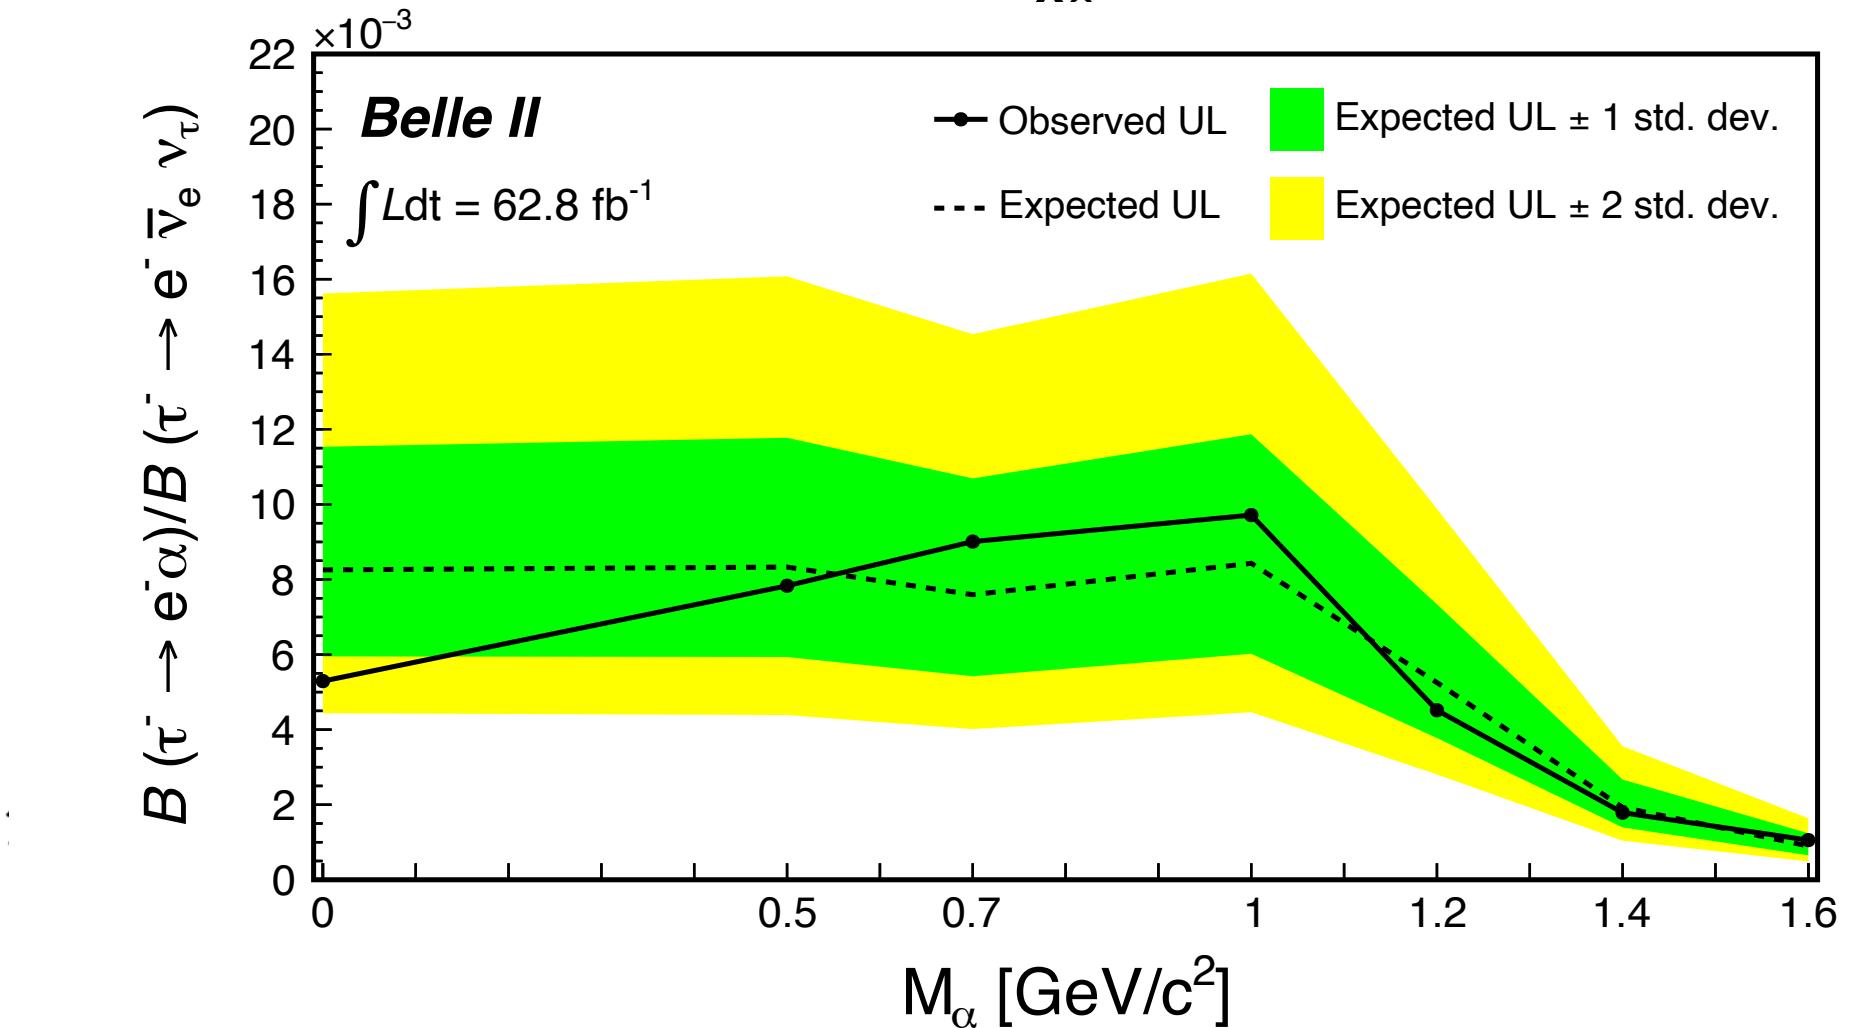

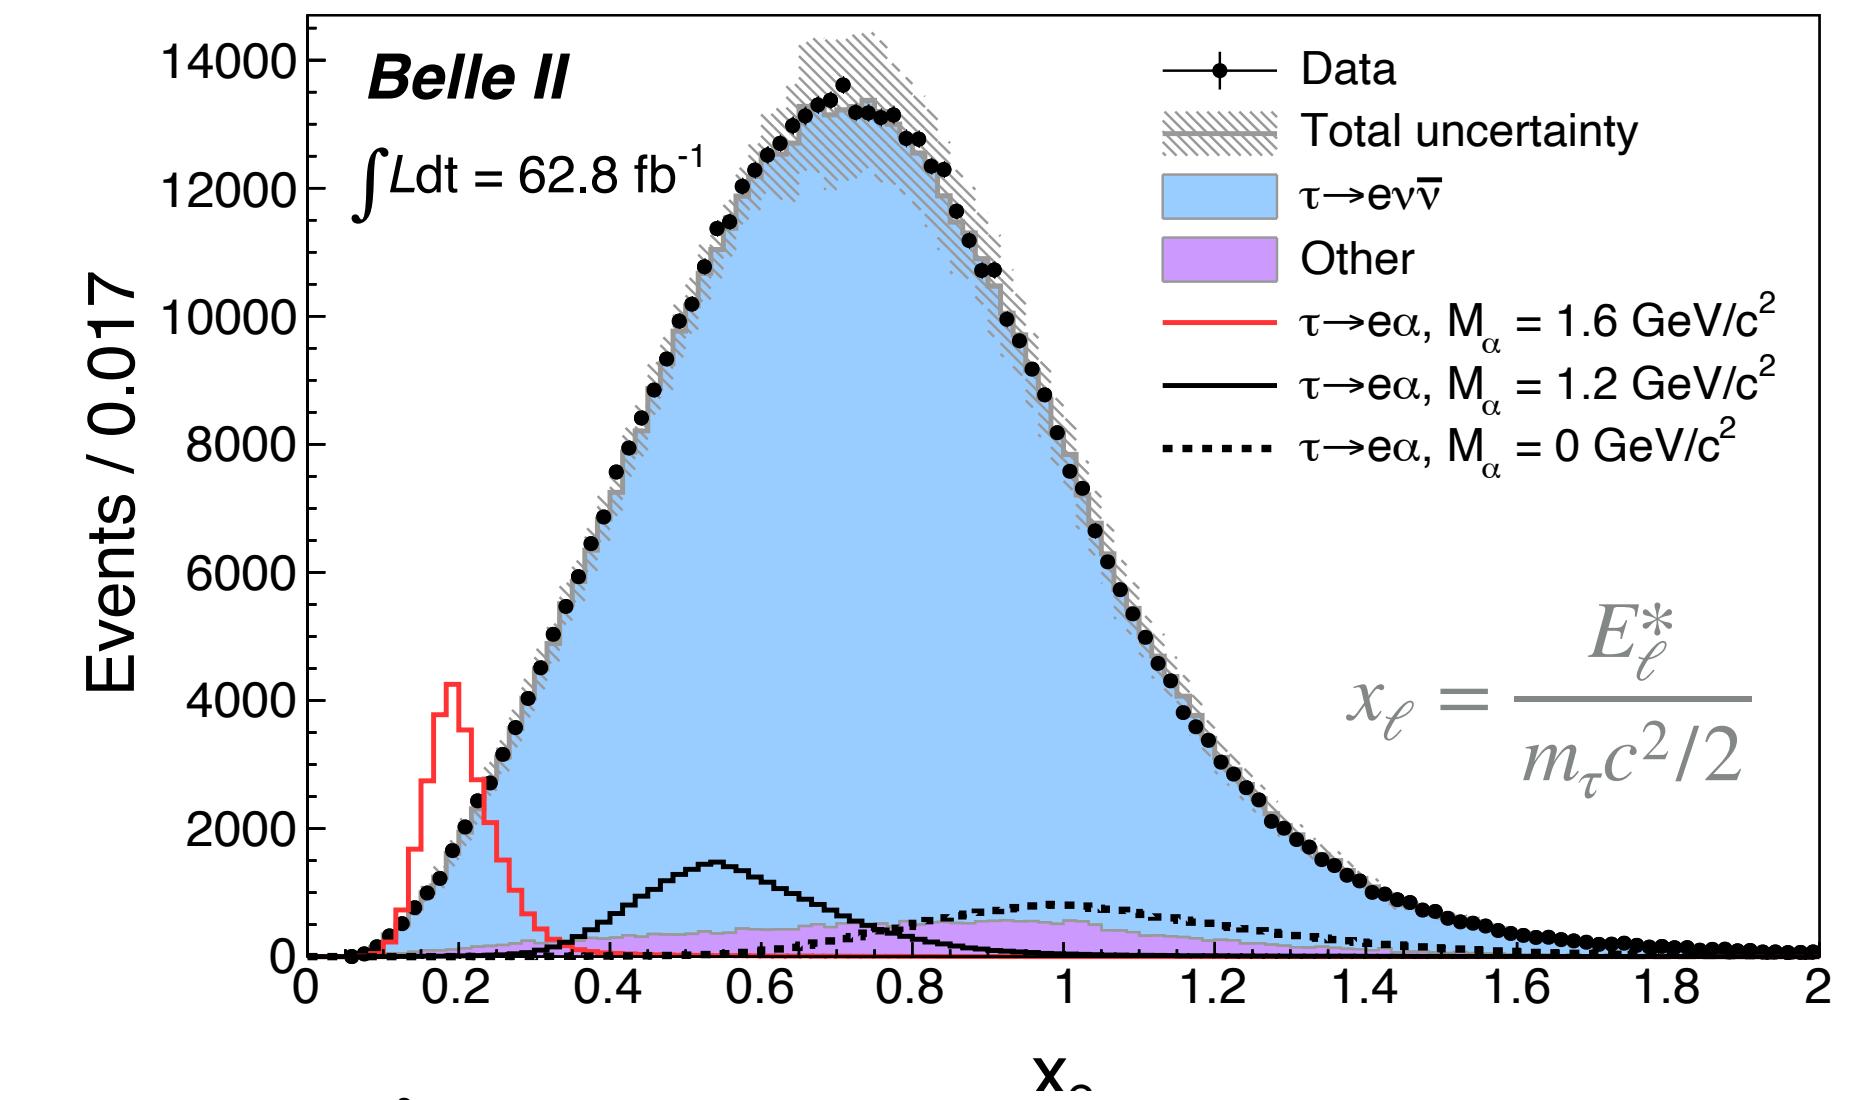

to be submitted soon!

Search for an invisible scalar in lepton-flavour violating τ decays.

- ▶ Search for $\tau_{\text{sig}} \rightarrow \ell \alpha$ with invisible scalar α and $\ell = e, \mu$
- ▶ Reconstruct $\tau_{\text{tag}} \rightarrow 3\pi\nu$ (ν missing) in $ee \rightarrow \tau_{\text{tag}}\tau_{\text{sig}}$
- ▶ Approximate τ_{sig} rest-frame by:
 - ▶ $E_{\tau_{\text{sig}}} \approx E_{\text{cms}}/2$ and $\hat{p}_{\text{sig}} \approx -\vec{p}_{\tau_{\text{tag}}}/|\vec{p}_{\tau_{\text{tag}}}|$
- ▶ Two body signal decay topology
- ▶ Search for bump on top of $\tau_{\text{sig}} \rightarrow \ell \nu \bar{\nu}$
- ▶ Observed limits using 62.8 fb^{-1} are 2.2 to 14 stronger than previous limits set by ARGUS [1]

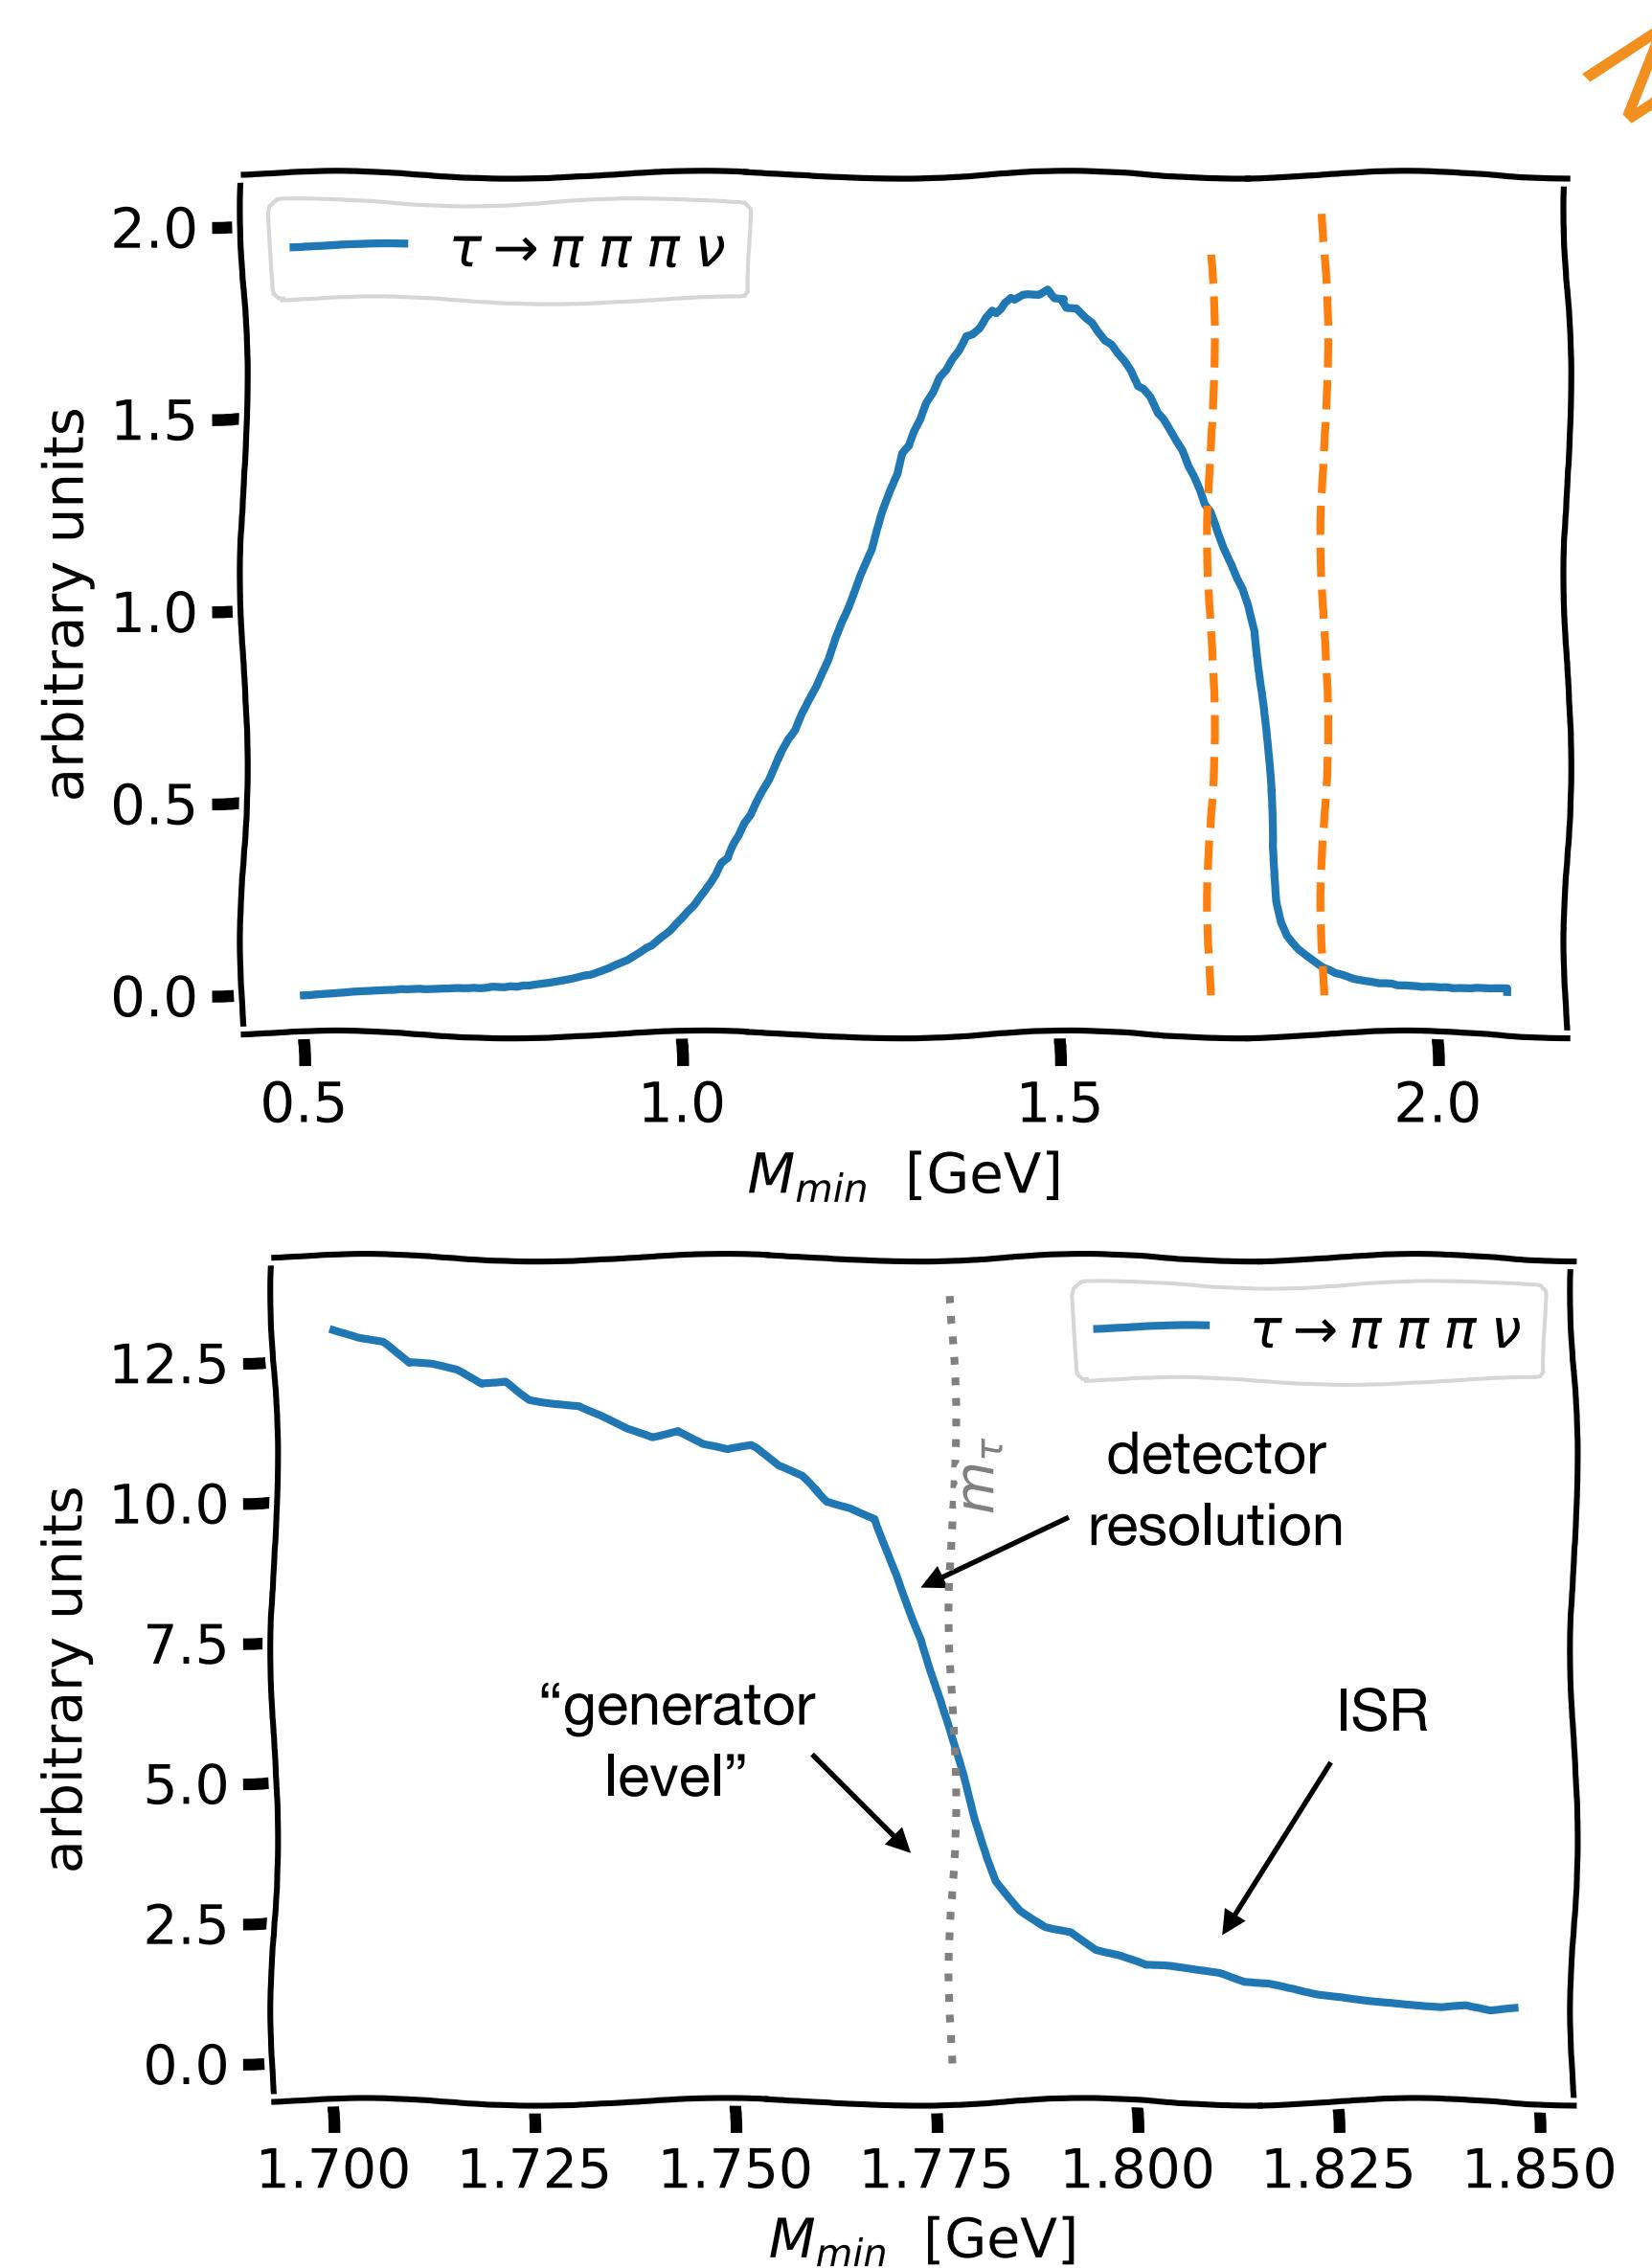

[arXiv:2212.03634v1](https://arxiv.org/abs/2212.03634v1) accepted by PRL

Measurement of the τ -lepton mass.

New!¹⁰

- ▶ Large $e^+e^- \rightarrow \tau\tau$ cross-section and clean environment allow high precision τ measurements
- ▶ Reconstruct $\tau_{\text{tag}}^\pm \rightarrow \pi^\pm(\pi^0)\nu$ and $\tau_{\text{sig}} \rightarrow 3\pi\nu$ (ν missing)
- ▶ Four tracks and no additional high energy photons
- ▶ Study M_{\min} variable to access mass:
 - ▶ Sharp step at m_τ
 - ▶ Candidates at larger M_{\min} due to ISR
 - ▶ Smearing of the edge due to detector resolution
- ▶ Use empirical fit function

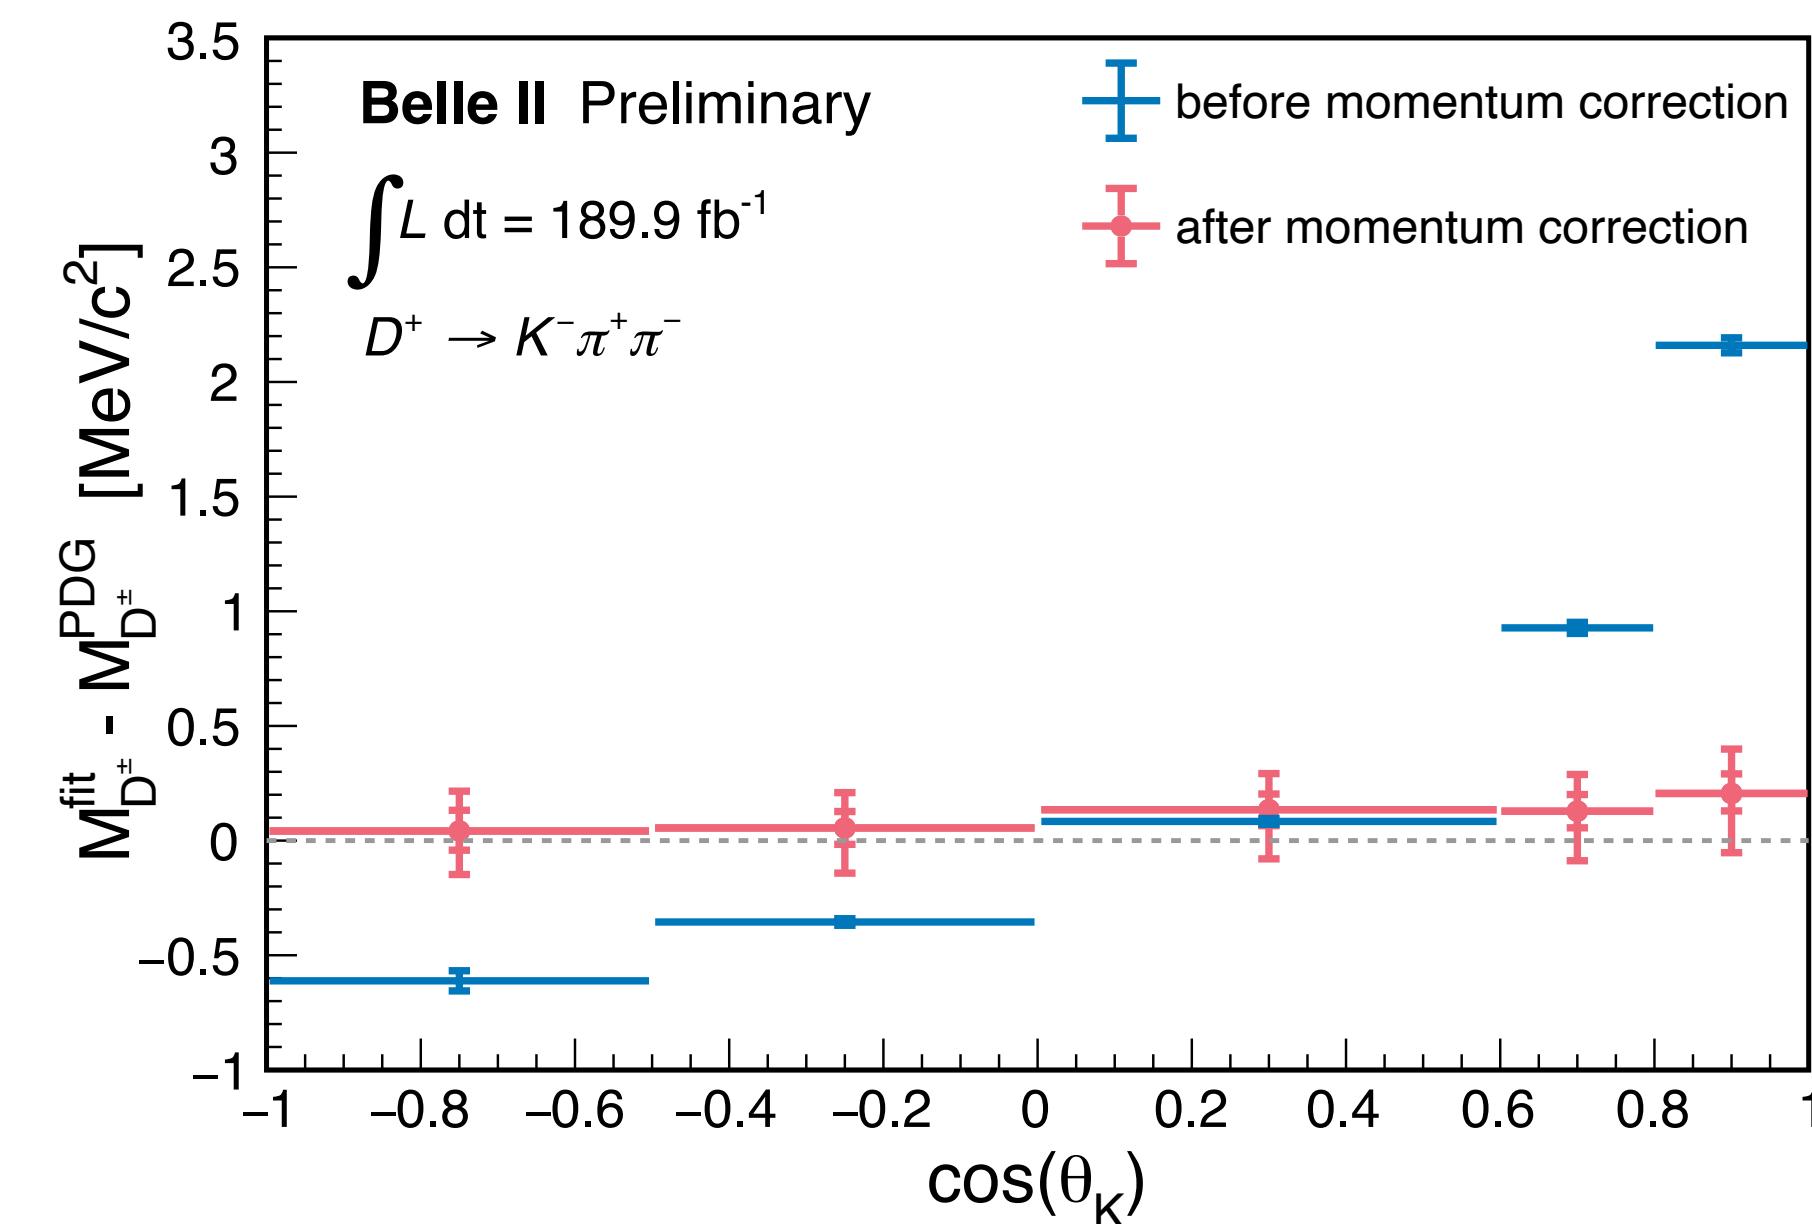

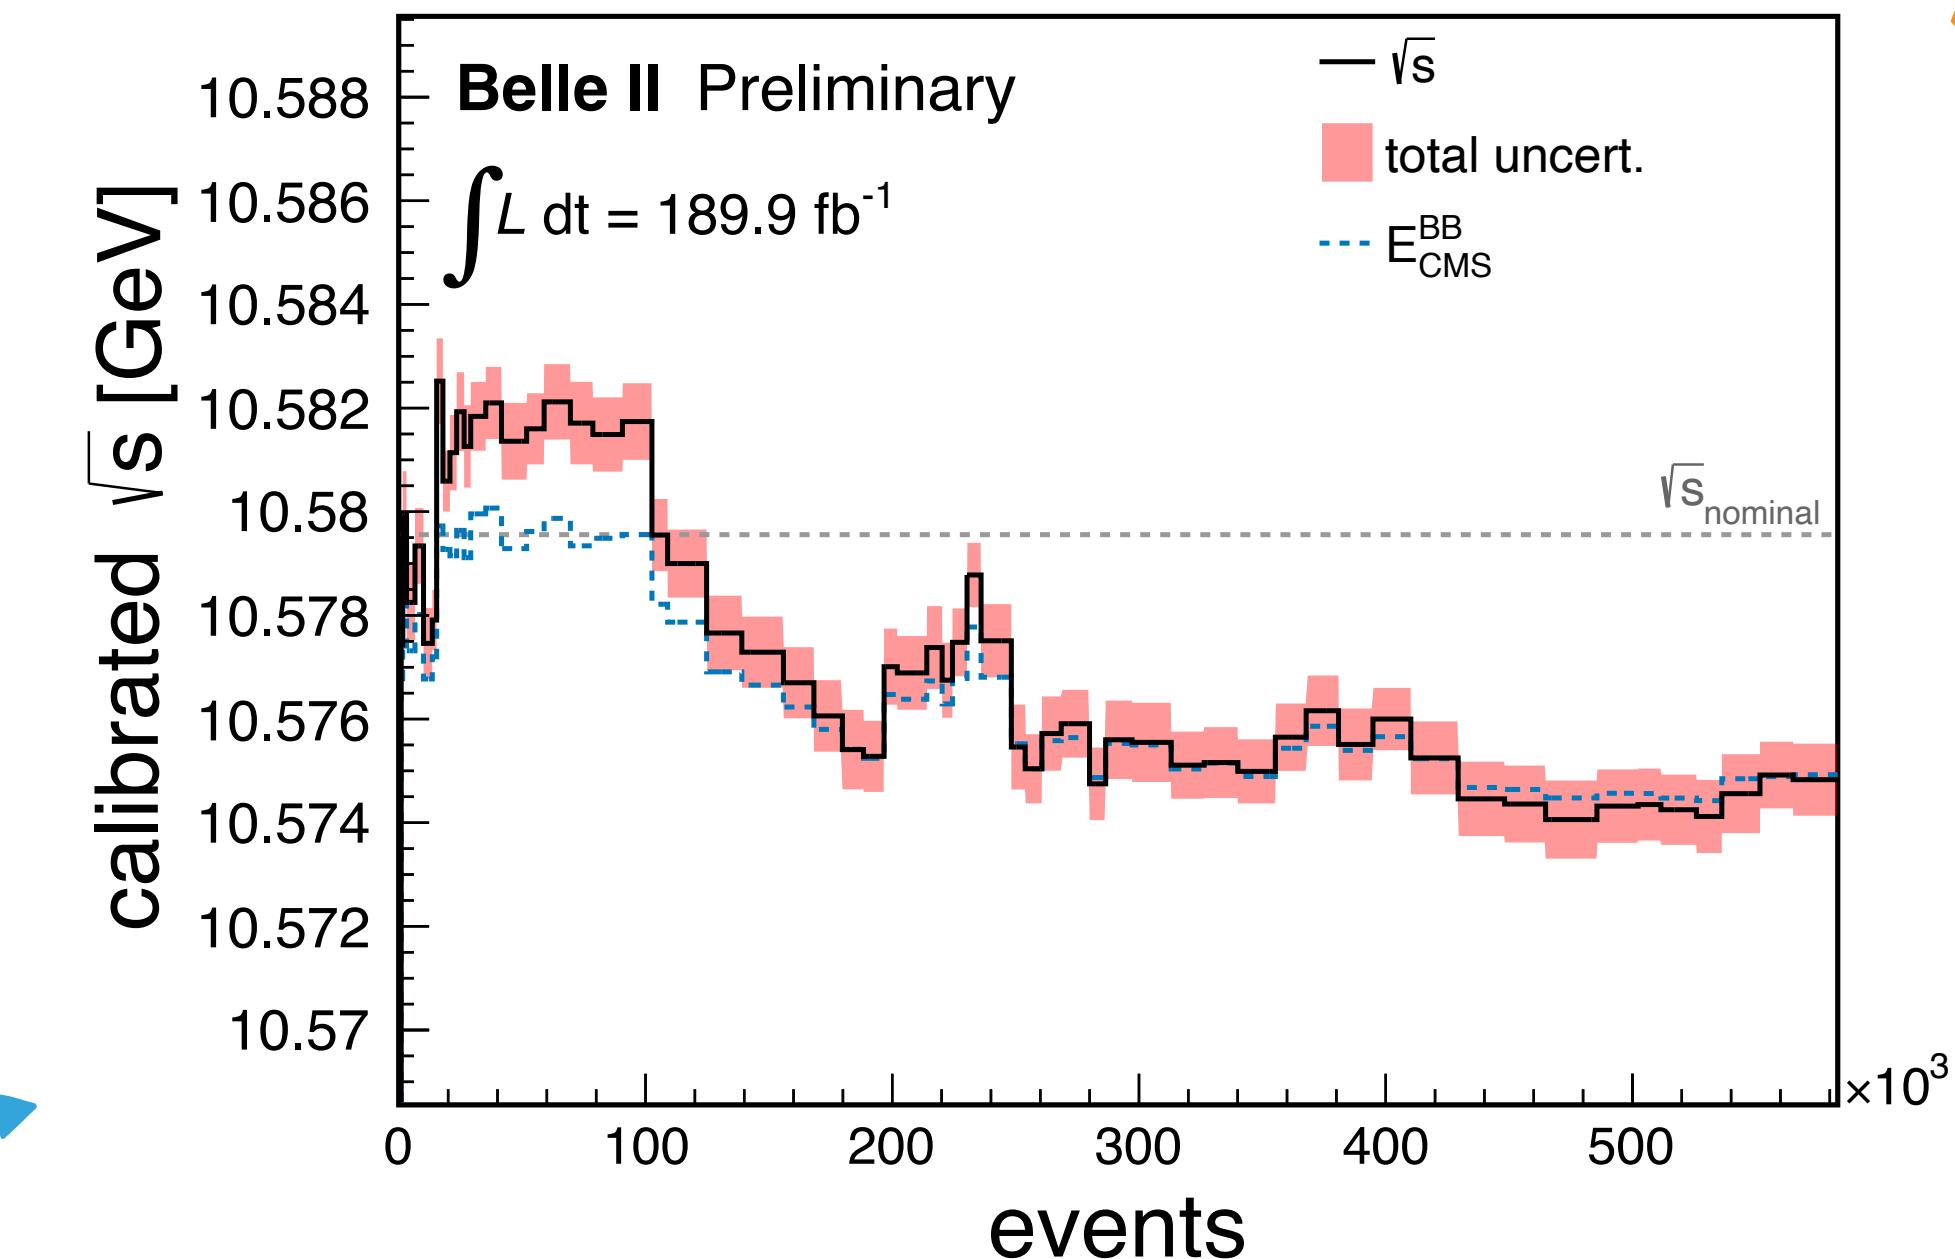

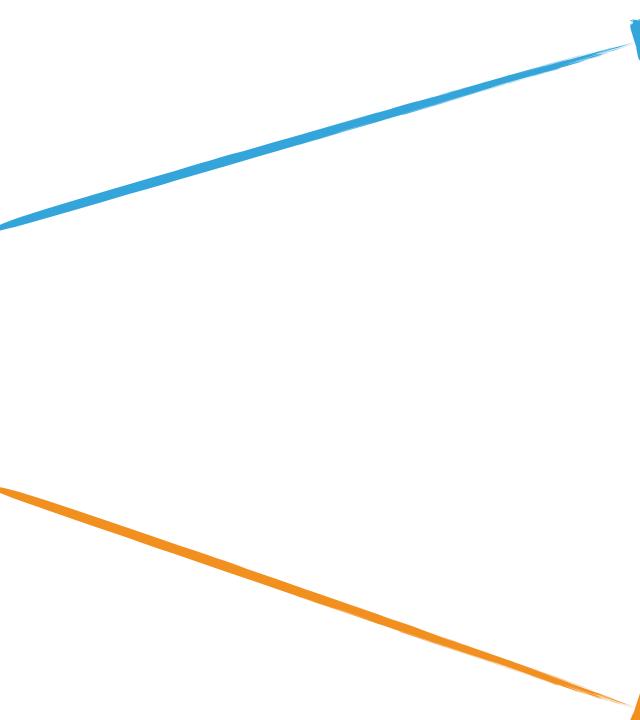

$$M_{\min} = \sqrt{M_{3\pi}^2 + 2(\sqrt{s}/2 - E_{3\pi}^*)(E_{3\pi}^* - P_{3\pi}^*)} \leq m_\tau$$

Measurement of the τ -lepton mass.

- Benchmark for precision capabilities of Belle II
- Control of systematic uncertainties is key:

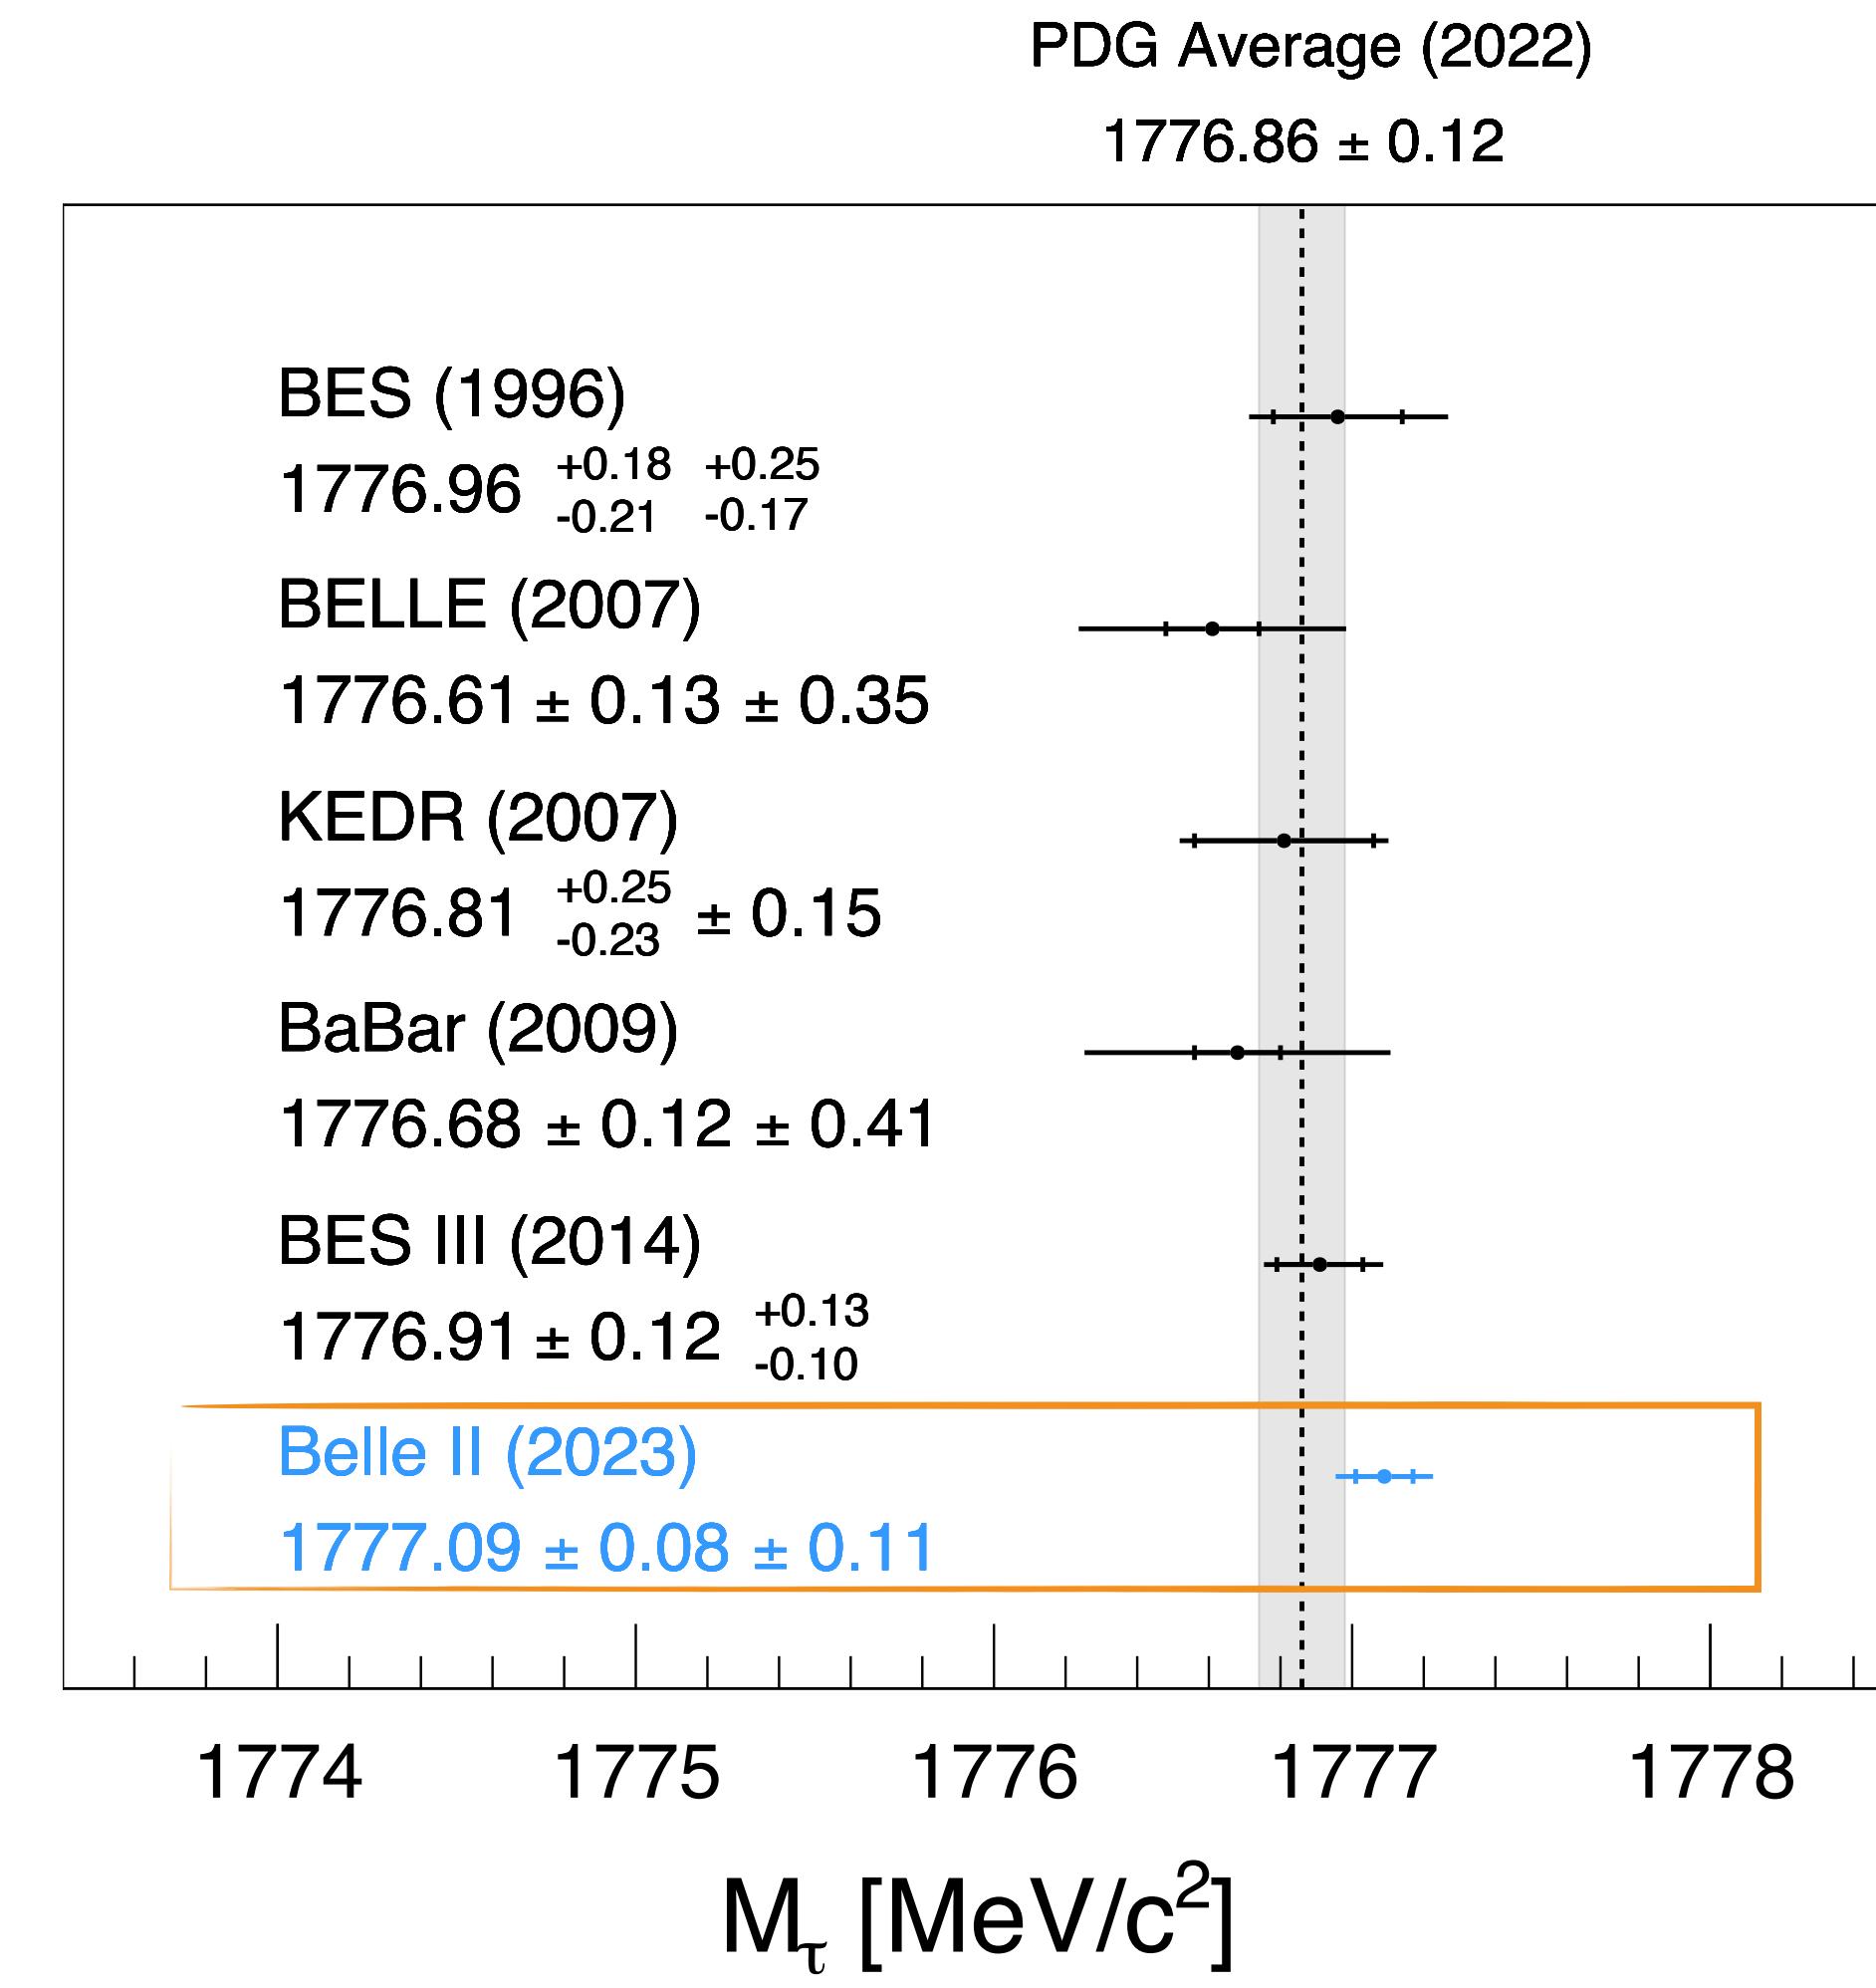

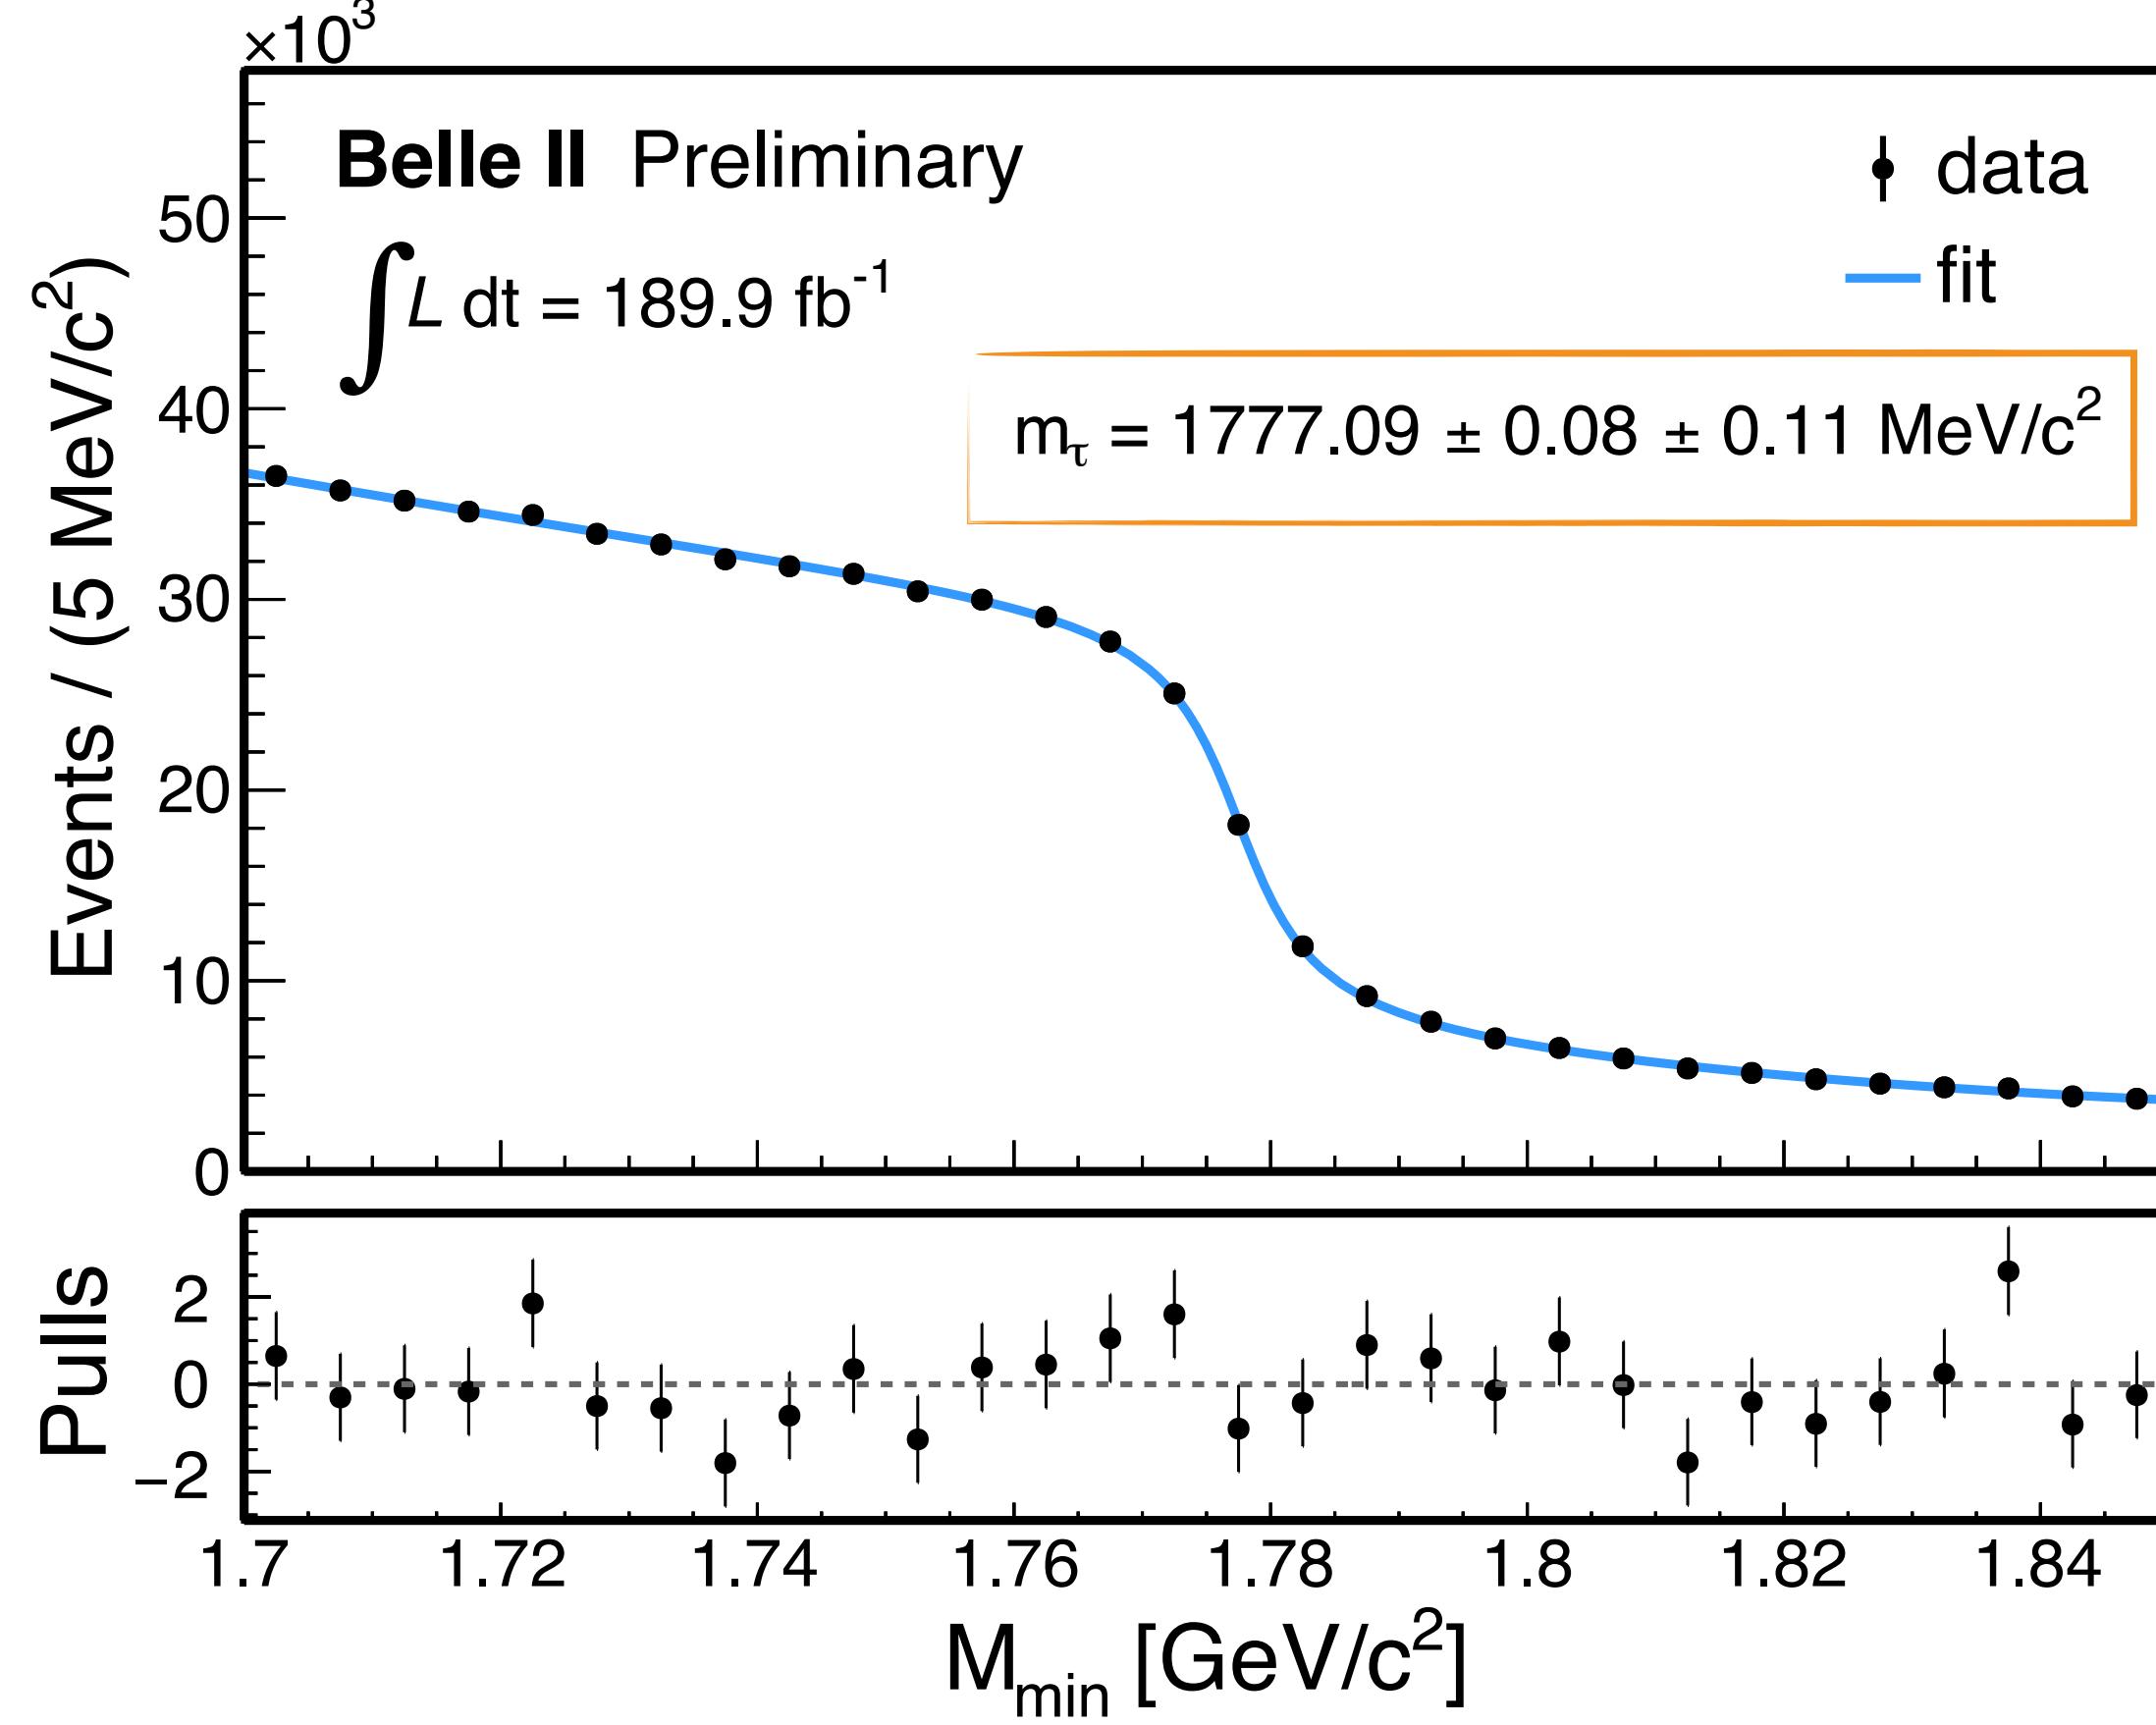

$$M_{\min} = \sqrt{M_{3\pi}^2 + 2(\sqrt{s}/2 - E_{3\pi}^*)(E_{3\pi}^* - P_{3\pi}^*)} \leq m_\tau$$

Source	Uncertainty [MeV/c ²]
<u>Knowledge of the colliding beams:</u>	
Beam energy correction	0.07
Boost vector	≤ 0.01
<u>Reconstruction of charged particles:</u>

Total	0.11

Measurement of the τ -lepton mass.

12
New!

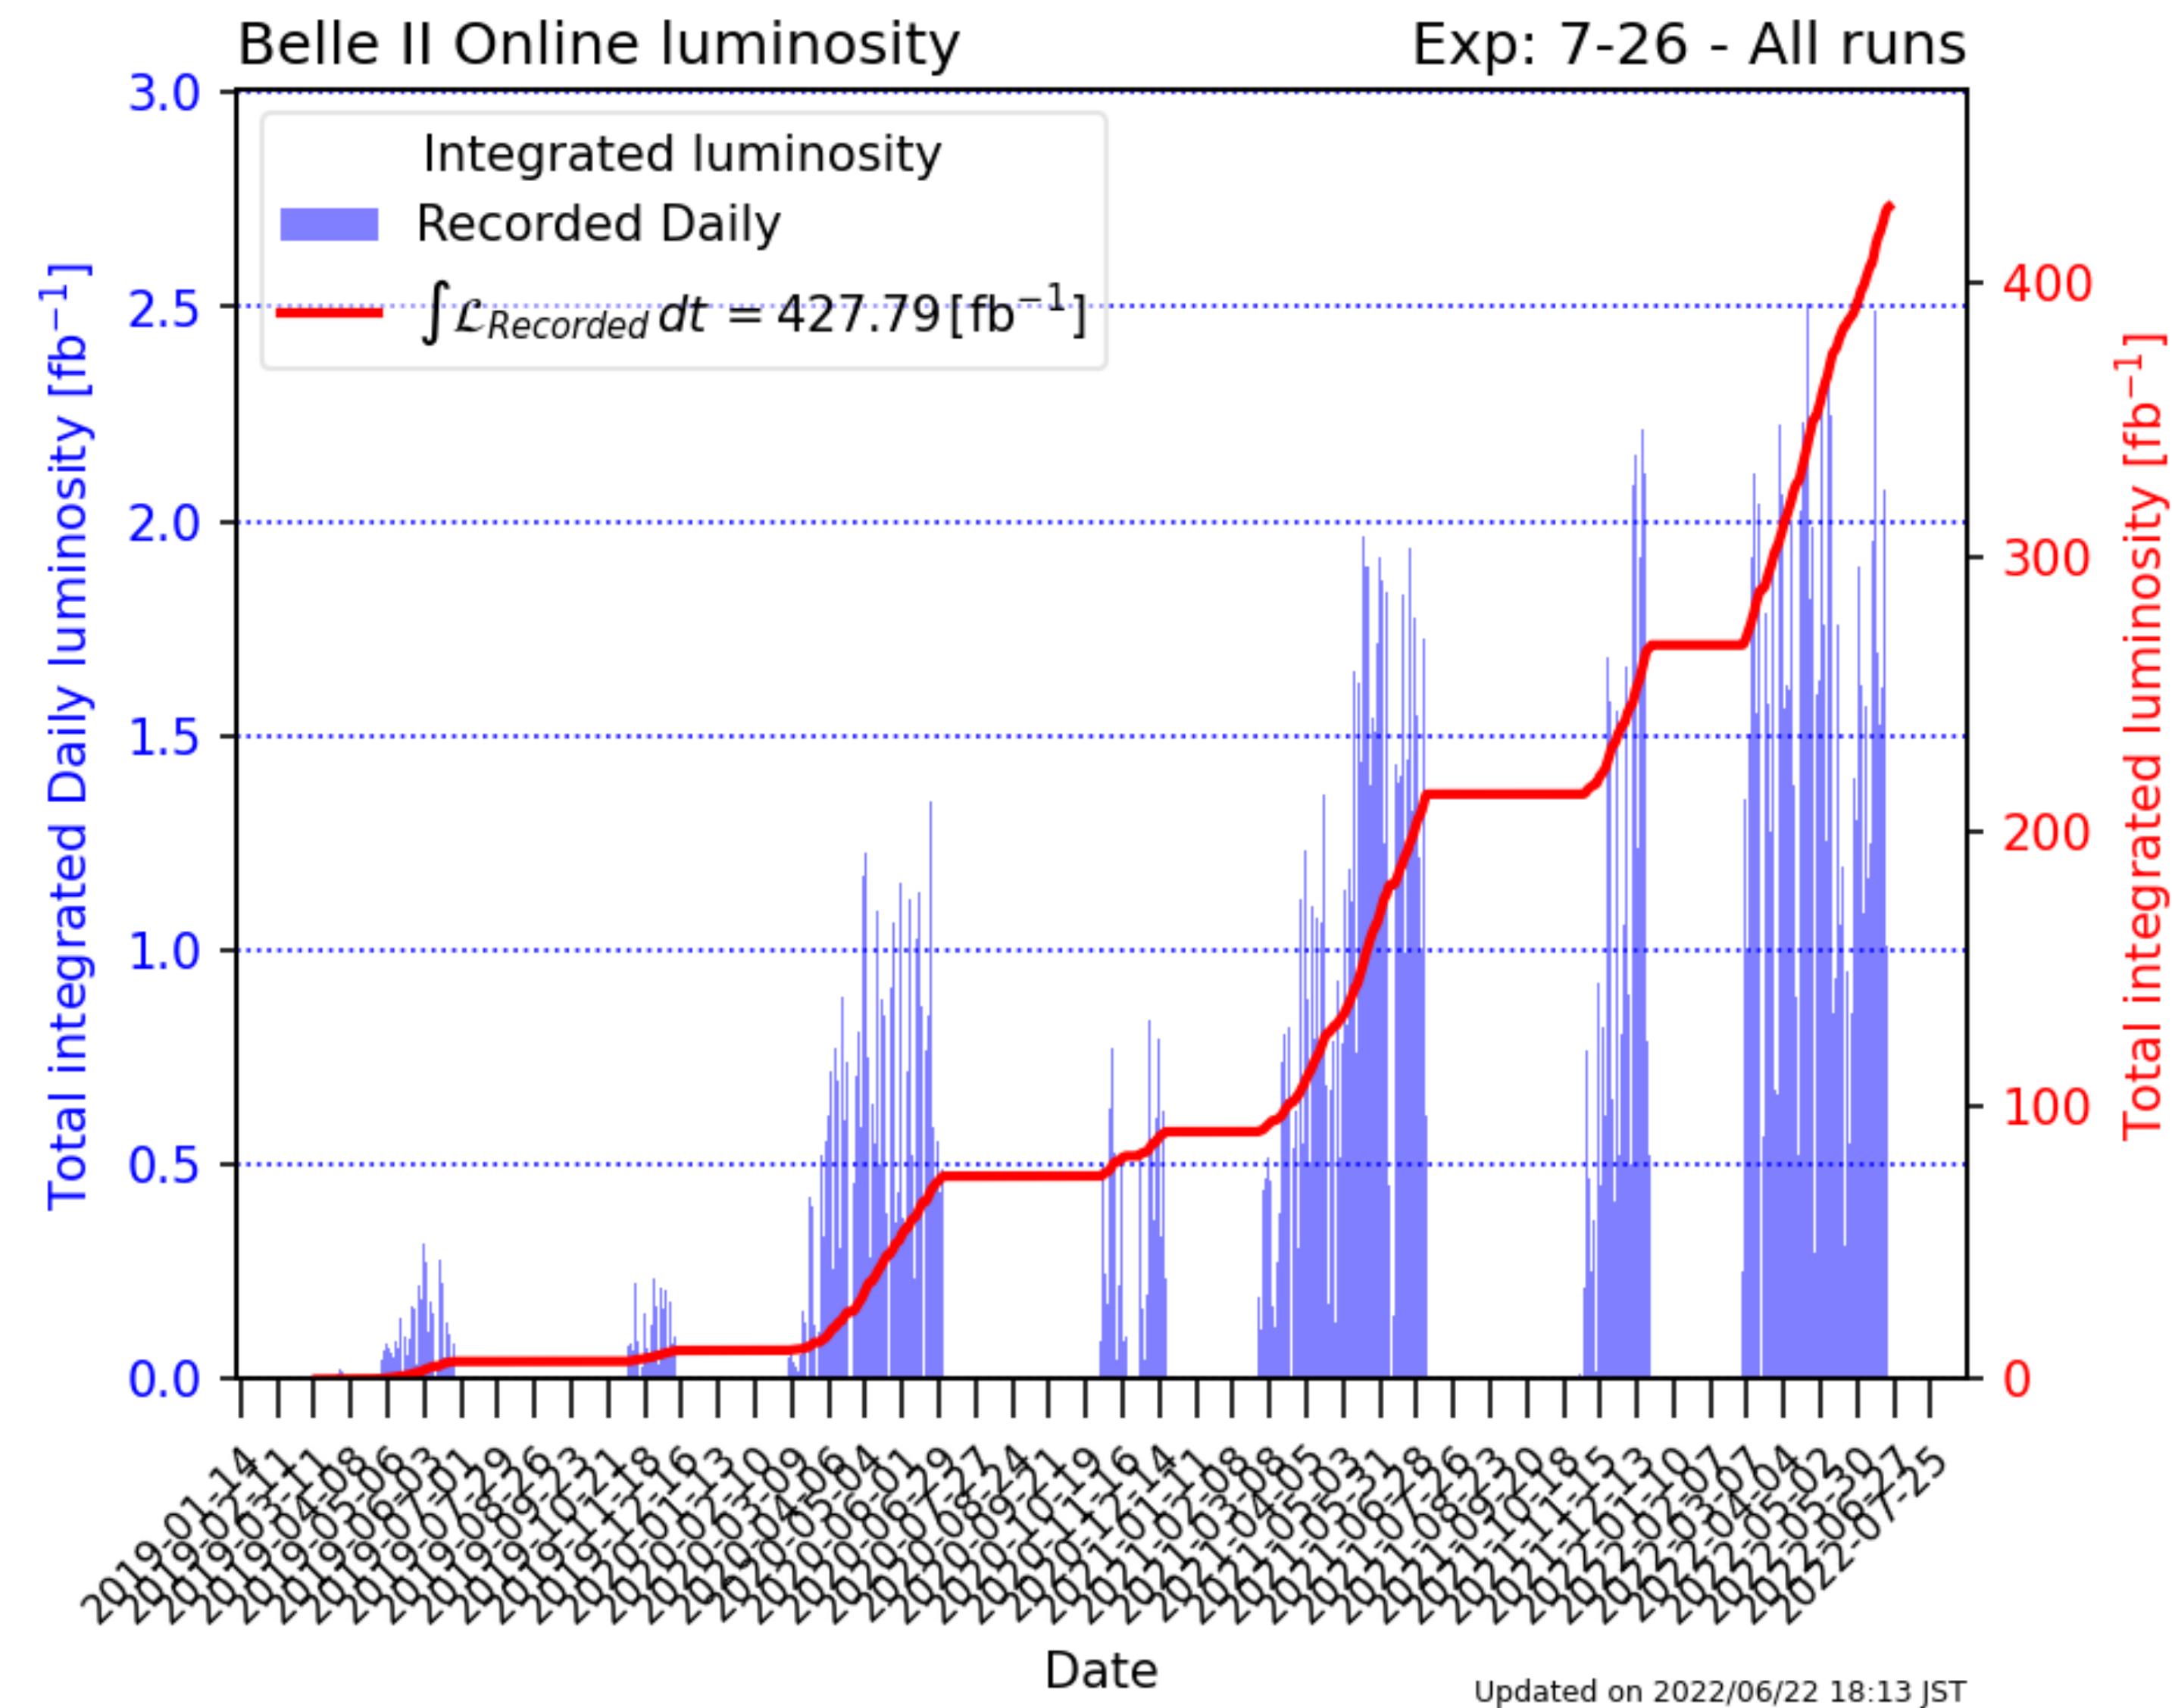

- Worlds most precise τ mass measurement!

Summary.

- Recent **dark sector** and τ results from Belle II:
 - **New!** Search for a **long-lived (pseudo-)scalar** in $b \rightarrow s$ transitions (paper in preparation)
 - Search for **invisible Z'** in $ee \rightarrow \mu\mu Z'$ [arXiv:2212.03066](#)
 - Search for **$\tau\tau$ resonance** in $ee \rightarrow \mu\mu\tau\tau$ (paper in preparation)
 - Search for **invisible LF-violating scalar** in $\tau \rightarrow \ell\alpha$ [arXiv:2212.03634](#)
 - **New!** Measurement of the τ -lepton mass (paper in preparation)
- Belle II has a unique sensitivity to light Dark-Sectors and is able to perform world-leading precision measurements
- Results are complementary to higher-energy collider and beam-dump experiments

Backup.

Long-shutdown activity and plans

Belle II stopped taking data in Summer 2022 for a long shutdown

- replacement of beam-pipe
- replacement of photomultipliers of the central PID detector (TOP)
- installation of 2-layered pixel vertex detector
- improved data-quality monitoring and alarm system
- complete transition to new DAQ boards (PCIe40)
- replacement of aging components
- additional shielding and increased resilience against beam backgrounds

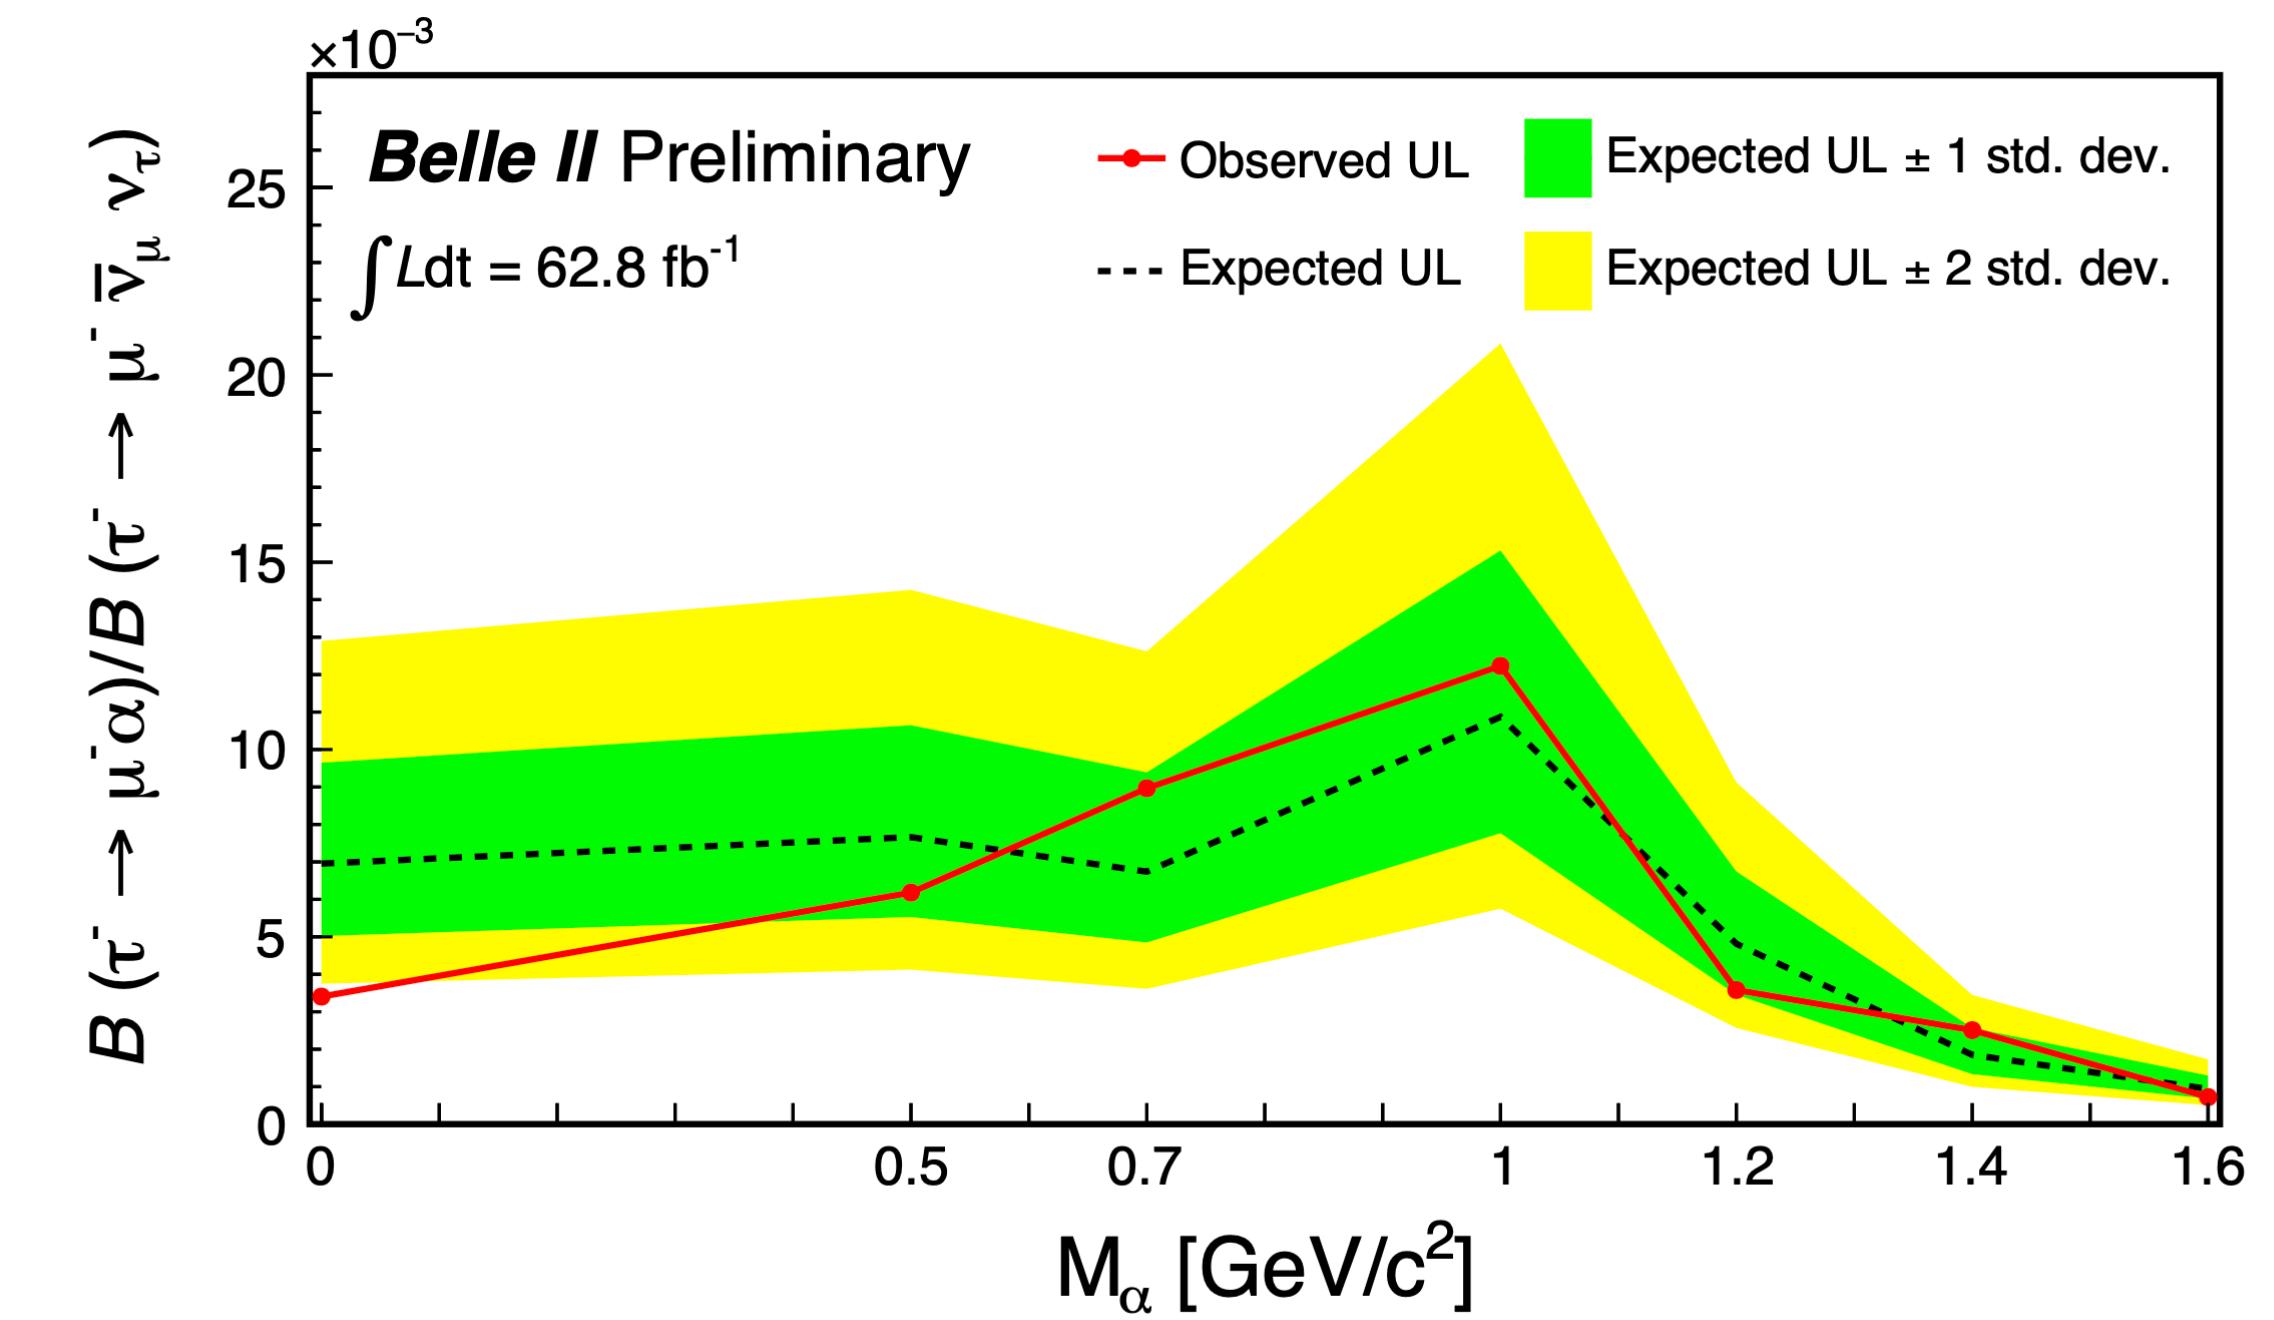

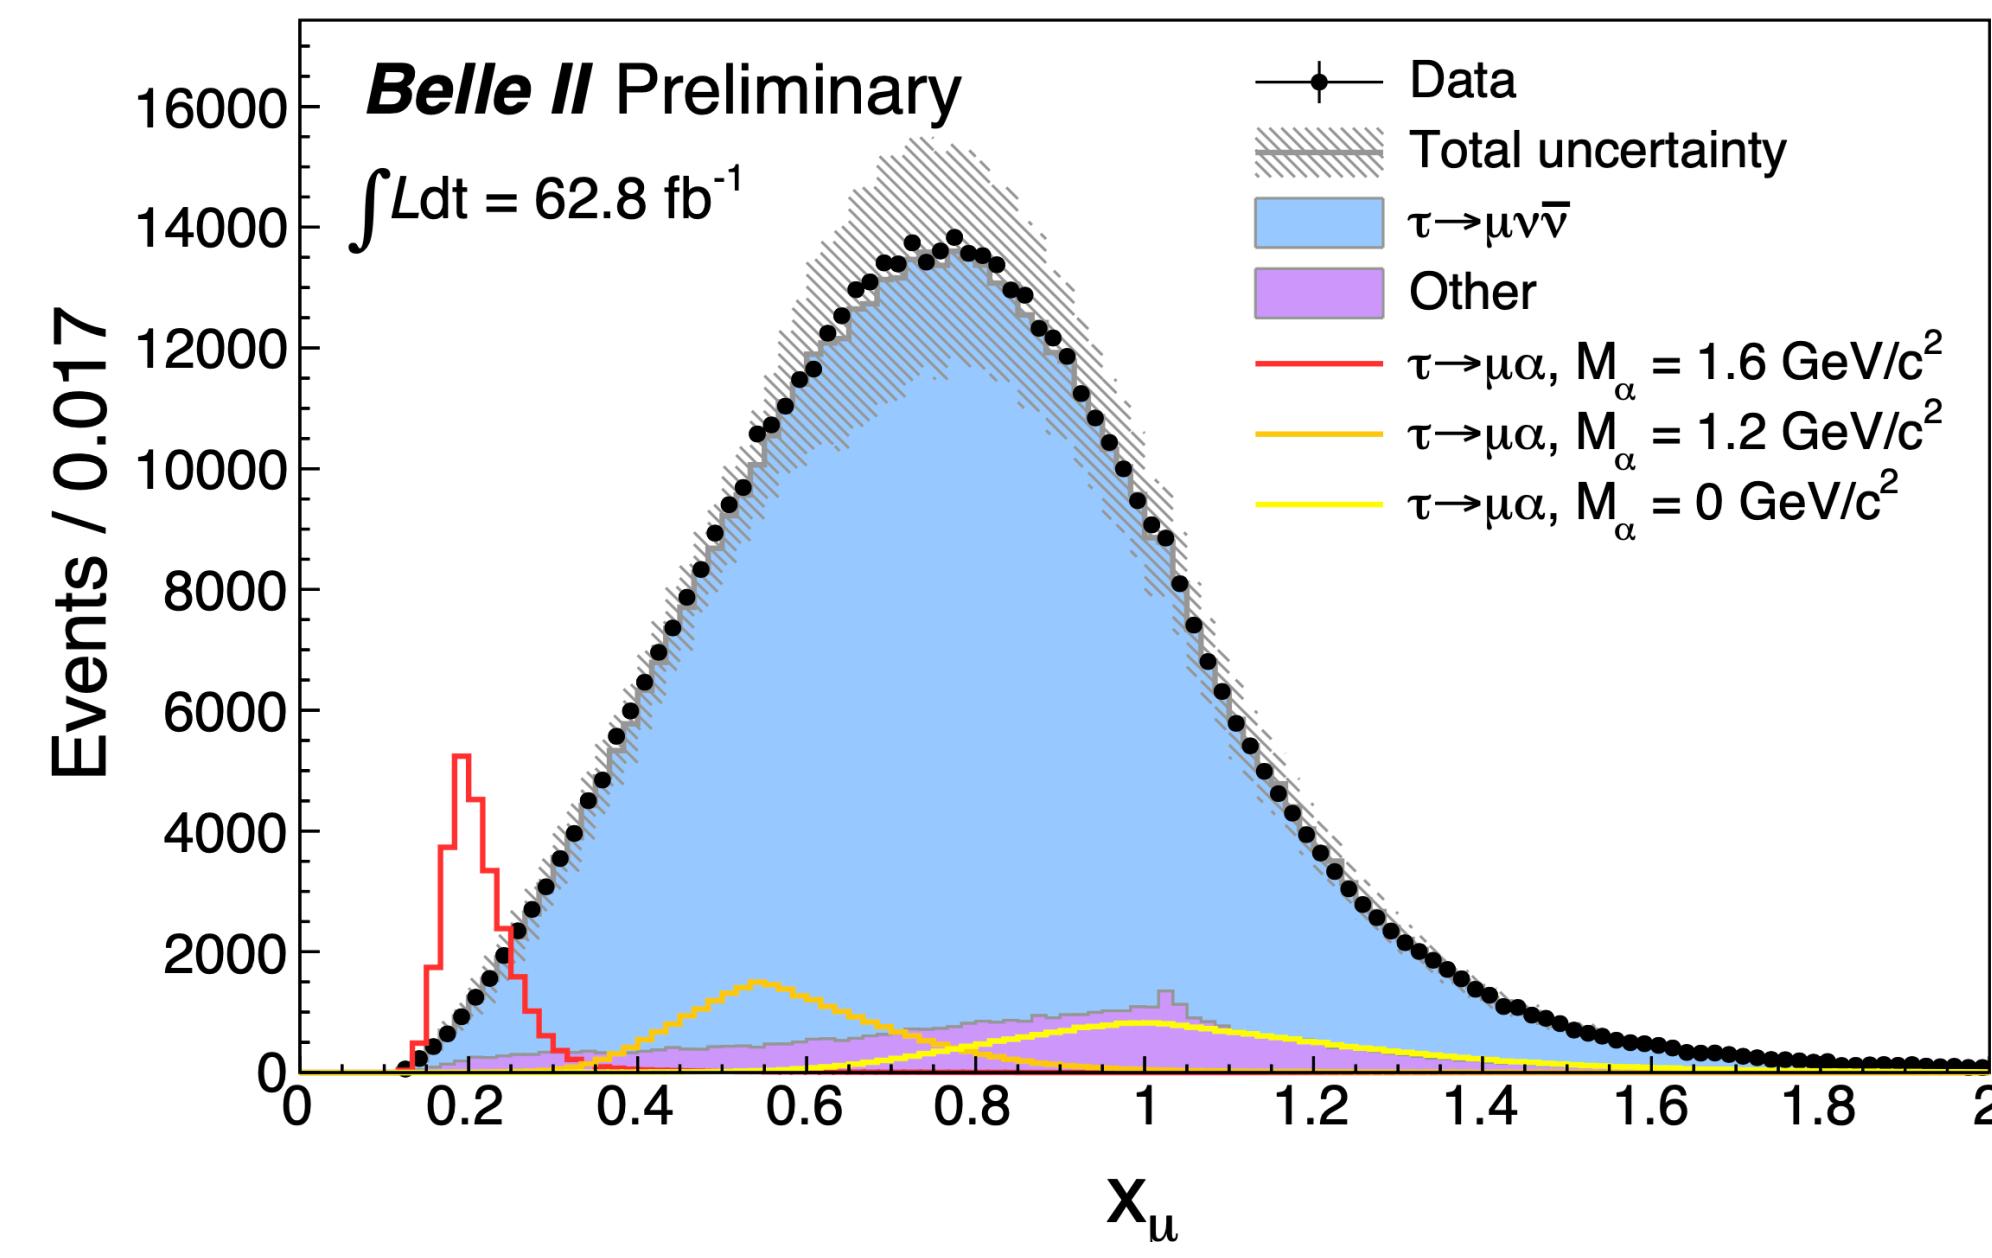

Currently working on pixel detector installation:

- > shipping to KEK in mid March
- > final test at KEK scheduled in April

On track to resume data taking next winter with new pixel detector
